Get Started with i>clicker 7

System Requirements

Before starting, make sure that your computer system meets or exceeds the following i>clicker system requirements. In addition to these computer requirements, a projection system is highly recommended for presentation purposes.

Windows Requirements:

- Windows 7, Windows 8 or higher operating system (32- or 64-bit), with .NET 4.0.3
- 500 MHz Pentium (or faster) processor
- 256 MB RAM (or larger) recommended
- One available USB 2.0 port
- Minimum screen resolution of 1024 x 600 pixels
- Minimum Excel 2007 (or equivalent) required to view reports

Macintosh Requirements:

- Mac OSX version 10.9.5 or higher
- 500 MHz G4 (or faster) processor
- 256 MB RAM (or larger) recommended
- One available USB 2.0 port
- Minimum screen resolution of 1024 x 600 pixels
- Minimum Excel 2007 (or equivalent) required to view reports

Linux Requirements:

- 1 GHz G4 (or faster) processor
- Ubuntu 12.04, 14.04 LTS, 64-bit versions
- 512 MB RAM (1 GB recommended)
- One available USB 2.0 port
- Minimum screen resolution of 1024 x 600 pixels
- i>clicker base with firmware v5.04
- Minimum Excel 2007 (or equivalent) required to view reports

IMPORTANT: The Linux version requires super admin privileges to perform the initial set-up of the computer and does not support 32-bit systems. **i>clicker** for Linux currently only supports Ubuntu LTS releases.

Connect i>clicker to your computer

i>clicker is a plug-and-play system that requires no installation and minimal set-up for both the hardware and software. Follow the instructions below to set up *i>clicker*.

1. Connect the i>clicker base receiver to your computer through a USB port.

The LCD screen on the receiver lights up indicating that the receiver has power. Your computer may notify you that it recognizes new hardware and inform you when it is ready to use this hardware. This step may take a few seconds to complete.

IMPORTANT: To be sure that the receiver has sufficient power, plug the receiver directly into the computer and do not connect through the keyboard or a non-powered USB hub. For best performance, it is recommended that you plug the **i>clicker** receiver into a USB 2.0 port.

2. If you are running i>clicker from a flash drive, connect the i>clicker flash drive to the USB port on the back of the i>clicker receiver.

NOTE: If you receive a message indicating that you have plugged a high-speed USB device into a non high-speed USB port, it is recommended that you plug the flash drive into a USB port on your computer or copy the entire **iclicker** folder to your computer hard drive. Doing so will improve the overall performance of the **i>clicker** software. Please note **i>clicker** for Linux requires that you run the set-up process on the local computer as supporting software must be installed to the hard drive.

Running i>clicker from a flash drive is not required. i>clicker can be run from your computer. Running i>clicker from a flash drive is a convenience if you are using a lecture/classroom computer.

3. Open the flash drive folder once it appears on your desktop.

The flash drive provides access to the **i>clicker** software and your course data. Review the contents of **iclicker** folder on the flash drive.

NOTE: It is recommended that you run Check for Update the first time you use **i>clicker** and at least annually.

4. Download i>clicker software

If you are not using a flash drive or need the i>clicker software, you can download it from www1.iclicker.com.

NOTE: The i>clicker software for Windows and Linux download folder is zipped and must be extracted before use. You will need to "unzip" or "extract" the folder and save it to the destination of your choice on your computer.

Check for update

*The **Check for Update** feature allows you to check for the latest version of **i>clicker** from within the program and easily update the program without having to manually move files. Any class data you may have is safe and will continue to work with both old and new versions of **i>clicker**.*

IMPORTANT: You need to have an Internet connection to successfully check for updates.

1. Start the i>clicker application.

2. Choose the menu option Help > Check for Update.
3. Select the Update button to begin the update process.

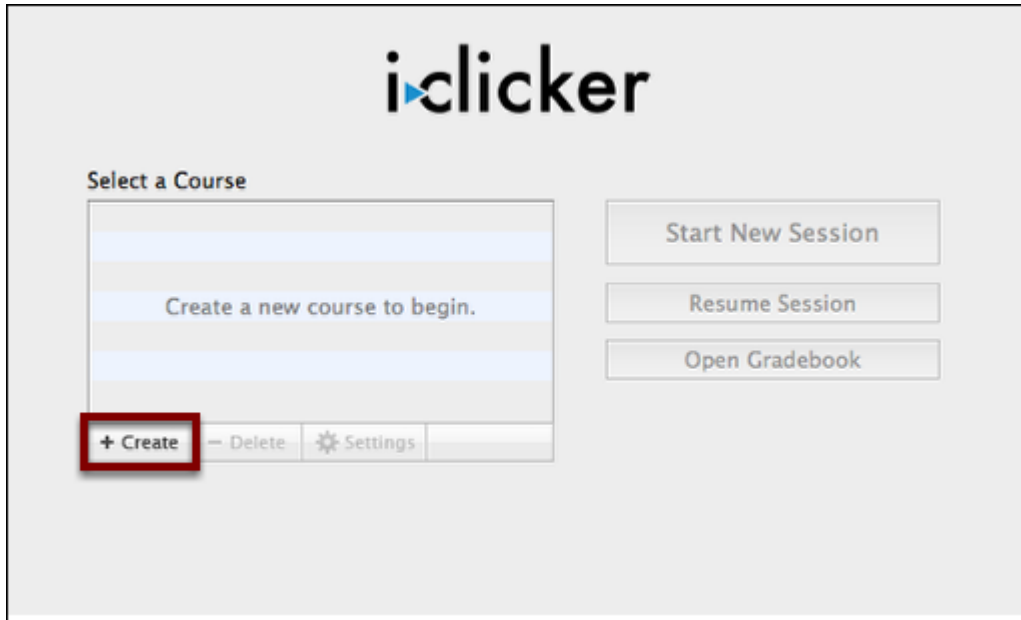

If a newer version of **i>clicker** is found, a message informs you that an update is available. The window includes an option to review the release notes of the new version. Upgrading your software may take several minutes.

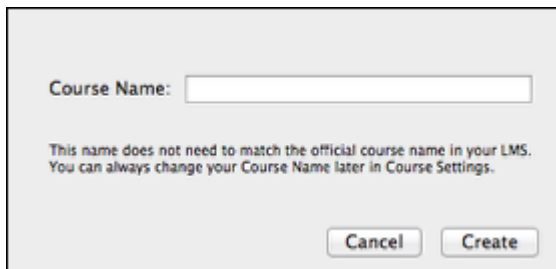

Create a course

Once you have set up your software and hardware, the first thing you will need to do is create your courses.

1. Choose to create a course.

2. Enter a course name and choose to create the course.

The image shows a 'Course Name' dialog box. It has a text input field for 'Course Name:'. Below the input field, there is a note: 'This name does not need to match the official course name in your LMS. You can always change your Course Name later in Course Settings.' At the bottom of the dialog box, there are two buttons: 'Cancel' and 'Create'.

i>clicker automatically creates a new course sub-folder in the *Classes* folder.

3. Review the i>clicker Home window.

Returning to the **i>clicker Home** window, your course name now appears in the list box and most, if not all, of the controls are now enabled. Repeat steps 1-2 to create as many courses or sections as you need.

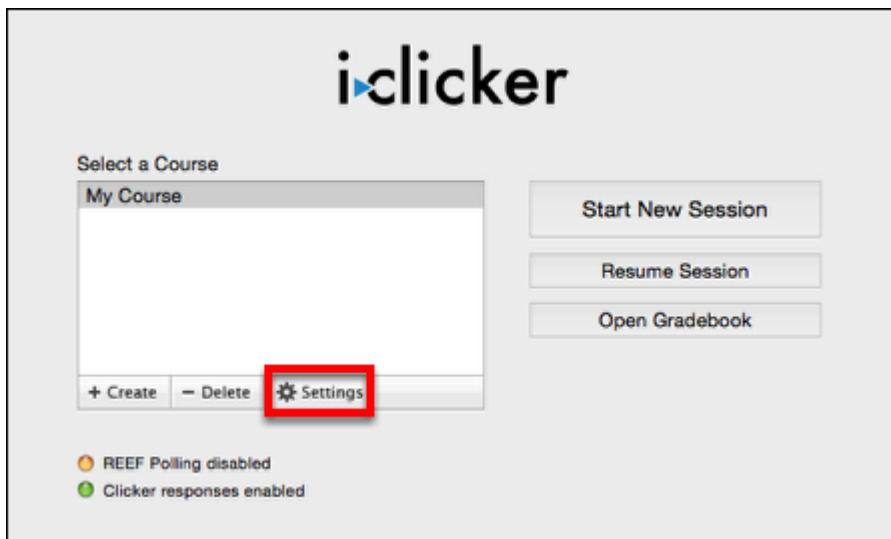

Now that you have created your course, you can start a session and begin polling immediately. However, you may want to prepare your roster and customize your course.

Note: if REEF Polling is enabled for your course, you can run polling sessions without a base. If you run polling without a base, only students using REEF Polling can answer. You will need to connect an i>clicker base to your computer if students using i>clicker remotes need to vote in your polling session.

Customize your course settings

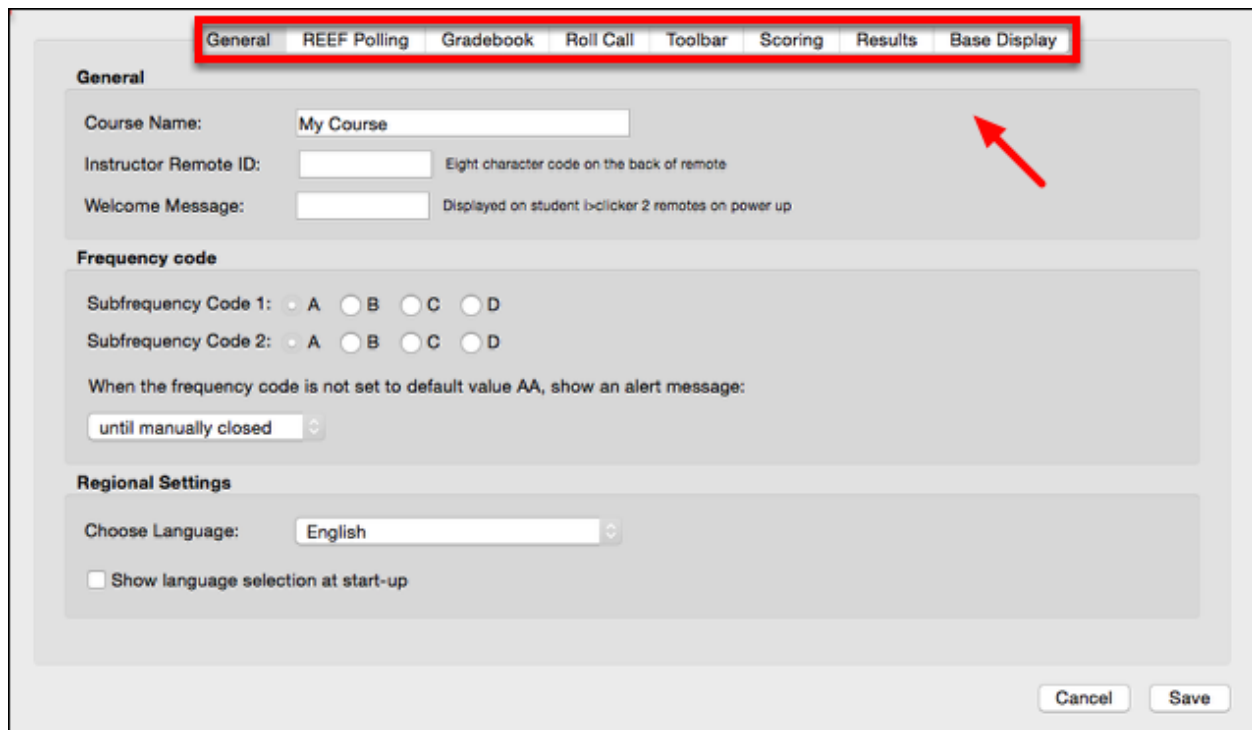

The i>clicker system is designed to be a simple classroom response system that can be used almost immediately upon launching. However, you may choose to take a little time to customize the software to your course.

1. Select your course.
2. Choose to edit the settings for a course.

Select the **Settings** (gear) button or choose **Course Settings** from the **Course** menu to view the course settings. Here you can review or change the settings for a specific course.

3. Update the course settings and choose to save your changes.

The screenshot shows the 'Course Settings' window with the 'General' tab selected. The tabs at the top are: General, REEF Polling, Gradebook, Roll Call, Toolbar, Scoring, Results, and Base Display. The 'General' tab contains the following fields:

- Course Name:** My Course
- Instructor Remote ID:** [Empty field] Eight character code on the back of remote
- Welcome Message:** [Empty field] Displayed on student i>clicker 2 remotes on power up
- Frequency code:**
 - Subfrequency Code 1: ☐ A ☐ B ☐ C ☐ D
 - Subfrequency Code 2: ☐ A ☐ B ☐ C ☐ D
- When the frequency code is not set to default value AA, show an alert message:**
 -
- Regional Settings:**
 - Choose Language:** English
 - ☐ Show language selection at start-up

At the bottom right, there are 'Cancel' and 'Save' buttons. A red arrow points to the 'Base Display' tab.

Choose the corresponding tab at the top of the **Course Settings** window to access the various settings.

Settings are course-specific. They are organized into eight tabs:

- General
- REEF Polling
- Gradebook
- Roll Call
- Toolbar
- Scoring
- Results

■ Base Display

Select the **Save** button when you finish making changes to the course settings.

Prepare your roster

The i>clicker system may be used as a simple tool to give you instant, anonymous feedback in class, in which case no registration procedure is necessary. However, if you (like most instructors) want to go a bit further and give credit to your students for class participation and/or performance, you need to:

- Create a class roster text file
- Associate each of your students with the unique serial number on their **i>clicker** remotes

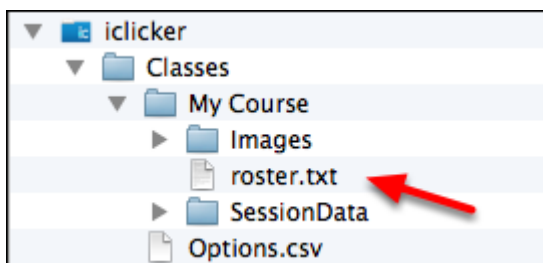

IMPORTANT: Do not use the following instructions for registering students if you are using **i>clicker** with a learning management system (LMS). Go to www.iclicker.com and choose **Support** to access the instructions for your specific LMS.

1. Create a course roster text file.

You must create a course roster text file as part of the student registration process.

NOTE: Students can vote with their **i>clicker** remotes before the registration process is complete. Until students register their remotes, their polling results are linked within gradebook to only the **i>clicker** remote ID.

1.1 Locate and open the roster.txt file for your course.

When you create an **i>clicker** course, the program automatically creates a new folder for that course in the **Classes** folder. You can find the **roster.txt** file in that folder. Use a word processor or text editor (e.g., Notepad, TextEdit, SimpleText) to open the file.

1.2 Create a student name (last name, first name) and ID entry for each student in your course.

Type the entries or copy/paste the student roster from another source (e.g., spreadsheet file). Use the format shown below.

EXAMPLE:

Stelzer, Tim, tstelzer

The roster file must have one line for each student in your class, with each line containing the student's **Last Name**, **First Name**, and **Student ID**, separated by commas. The Student ID may be a college ID number, email alias, or any other easily readable text string-as long as it is guaranteed to be unique for each student. We recommend that you use an ID number or naming convention that you currently use (personally or as required by your institution) for easiest import of **i>clicker** data into your course gradebook.

NOTE: When you open the **roster.txt** file you will see instructions and a sample entry. Delete the sample entry before entering the information for your students.

1.3 Save the roster.txt file in your course sub-folder.

2. Determine which registration option to use for your students and then follow the corresponding steps.

i>clicker offers two registration options:

Web Registration: Once each student registers a device online, simply choose to sync the registration database with your roster file. This process connects your roster entries with the corresponding **i>clicker** device. This is an easy process especially for larger classes.

In-class Roll Call: Using this option requires a few minutes during class. Use the **i>clicker** software to display a window that shows all of the student names in your class (pulled from the roster.txt file). Then, students enter a unique code on their remotes to connect their name to that clicker. This method is recommended only for smaller classes (< 50 students).

Refer to the instructions in the steps below to complete the registration process.

TIP: In-class and online registration are not mutually exclusive, and both can be used to register students in a course. For example, the majority of your students may have registered

online. For those who did not complete that step, use the in-class roll call method to complete the registration. Use the [loan a clicker to a student](#) option to permanently connect a student to a device.

3. Web registration

Follow these instructions to complete the web registration.

3.1 Instruct your students to complete the online registration form.

The screenshot shows the i>clicker registration form on a blue background. The form is titled "Register Your Clicker" and includes instructions: "Register your i>clicker remote so your instructor will be able to give you credit for using your clicker in class. Have questions? Visit our [student support portal](#)." The form fields are: Country (dropdown menu set to "United States"), First Name, Last Name, Student ID (with a note: "The ID assigned by your school. Check your syllabus or ask your instructor if you are unsure what to enter."), Remote ID (with a note: "The 8-character code found on your remote (see image). Codes only use letters A-F and numbers 0-9."), and Image Code (with a note: "The verification code shown in the image above."). Below the Image Code field is a checkbox for "I acknowledge that I have read and agree to the [Privacy Policy](#) and the [Terms of Use](#)". At the bottom are "Register" and "Reset Form" buttons. To the right of the form are four images of i>clicker devices: i>clicker 1 (side view), i>clicker 1 (back view), i>clicker 2 (back view), and i>clicker 2 (front view). A blue circle highlights the barcode on the back of the i>clicker 2 device, with the code "123ABC78" written below it. Labels point to the locations: "Behind Battery (newer models)", "Back", "Back", and "Power On Screen".

Have students go to www.iclicker.com, locate the registration form, and register their clicker. As a suggestion, require that your students complete the online registration form by a specified date.

TIP: Students can use a single **i>clicker** remote for multiple classes and only need to register on the web once. If a student makes a registration mistake they can simply register a second time.

3.2 Complete at least one polling session.

Before completing the web registration process, you must administer at least one polling session in class.

NOTE: If a student has not voted with their **i>clicker** remote, the online registration will not synchronize with the gradebook. The student must vote at least once in class. We recommend that you ask at least one clicker question, such as an attendance or ice-breaker question, on the first day of class in order to capture remote IDs.

3.3 Select your course and choose Open Gradebook.

IMPORTANT: Perform this and the remaining steps only after your students complete the online registration process.

3.4 Choose to sync the roster with the online registration database.

As you can see in Figure 1 before syncing, the **Name** fields show a device serial number in red (e.g., #45dd391) to indicate that those clickers are not connected to any students. One polling session is complete as reflected in the course average and course total results.

In Figure 2 after choosing **Sync**, most of the serial numbers have been replaced with the student names appearing in blue (e.g., Patrick Choo) to show that those students are now associated with a clicker. Syncing pulls the information from the online registration database and matches the details against the serial numbers and roster.

NOTE: If any of the numbers still appear in red, the student info (name or ID) in the online database may not match the info in your roster.txt file or the student may not have registered. Manually complete the process by selecting that number in the roster to display a **Student Details** window. Simply choose to associate that clicker with a student in your roster file. Alternatively, use the in-class roll call method described in Step 4 to complete the process if there are several device numbers still shown in red.

3.5 Resolve any synchronization conflicts.

The remote or REEF ID #86DD7922 was registered online to the name(s) in the yellow box and may match a student in your roster. Please match the student(s) in the Registration (yellow) box on the left below with the correct student in the Roster list on the right and click Accept.

Registration	Roster
Marty Smith (ms123)	Lisa Smith (ls9932)
	Marcia Smith (ms123)
	Kathryn Fritz (kf3399)
	Branden Granger (bg0421)
	Nina Hernandez (nh4430)

Accept Ignore All Ignore Cancel

During the synchronization process, you may need to resolve any inconsistencies between your roster and the web registration database. For example, the student name may not be an exact match. As shown in the example above, the registration database shows "**Marty**" and the roster shows "**Marcia**." However, this is the same student so select the corresponding roster entry and choose to accept.

If necessary, the program prompts you to resolve any conflicts. Your choices include:

- **Ignore:** no registration information is associated for that particular student
- **Accept:** connects the student name and remote ID in the registration database to the student entry in your roster

- **Cancel:** exits the synchronization process without making any changes

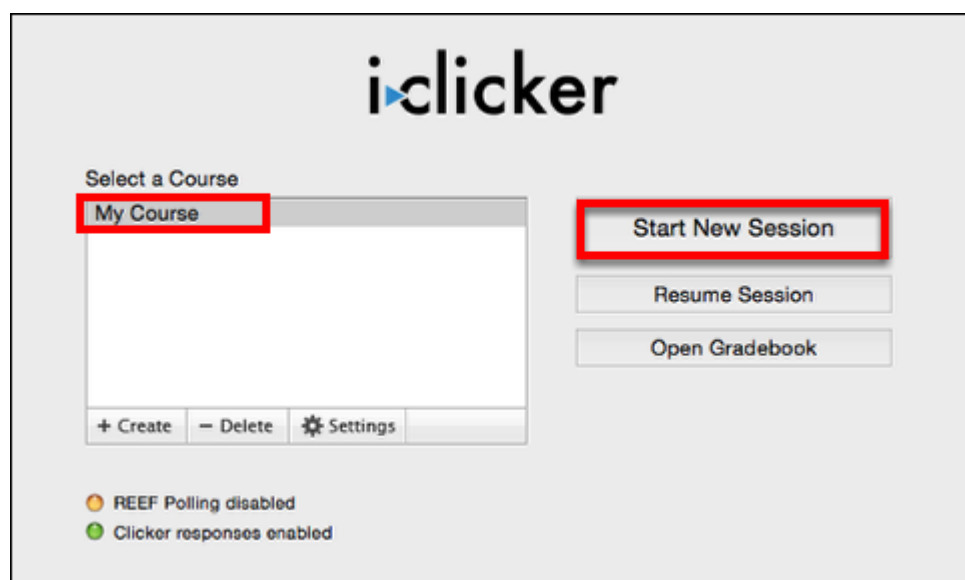

When you connect a student record, the student name and ID recorded in the roster.txt file is used in the gradebook.

TIP: Students can register multiple times without affecting the synchronization process. If you are unsure if a web registration matches the student's roster entry, ignore the registration. Ask your student to register online again, and run another web synchronization process at a later time.

4. In-class roll call

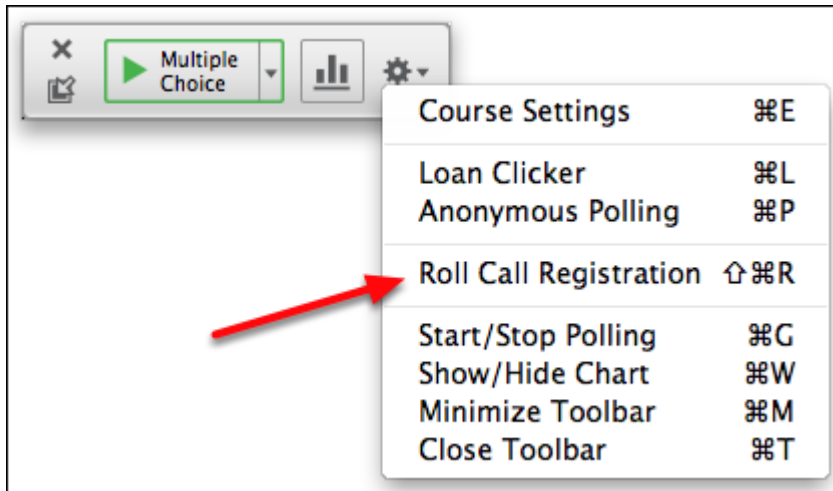

Follow these instructions to complete the in-class roll call to connect the students in your roster to the corresponding clicker. Recommended for classes with fewer than 50 students.

4.1 Select your course and choose Start New Session.

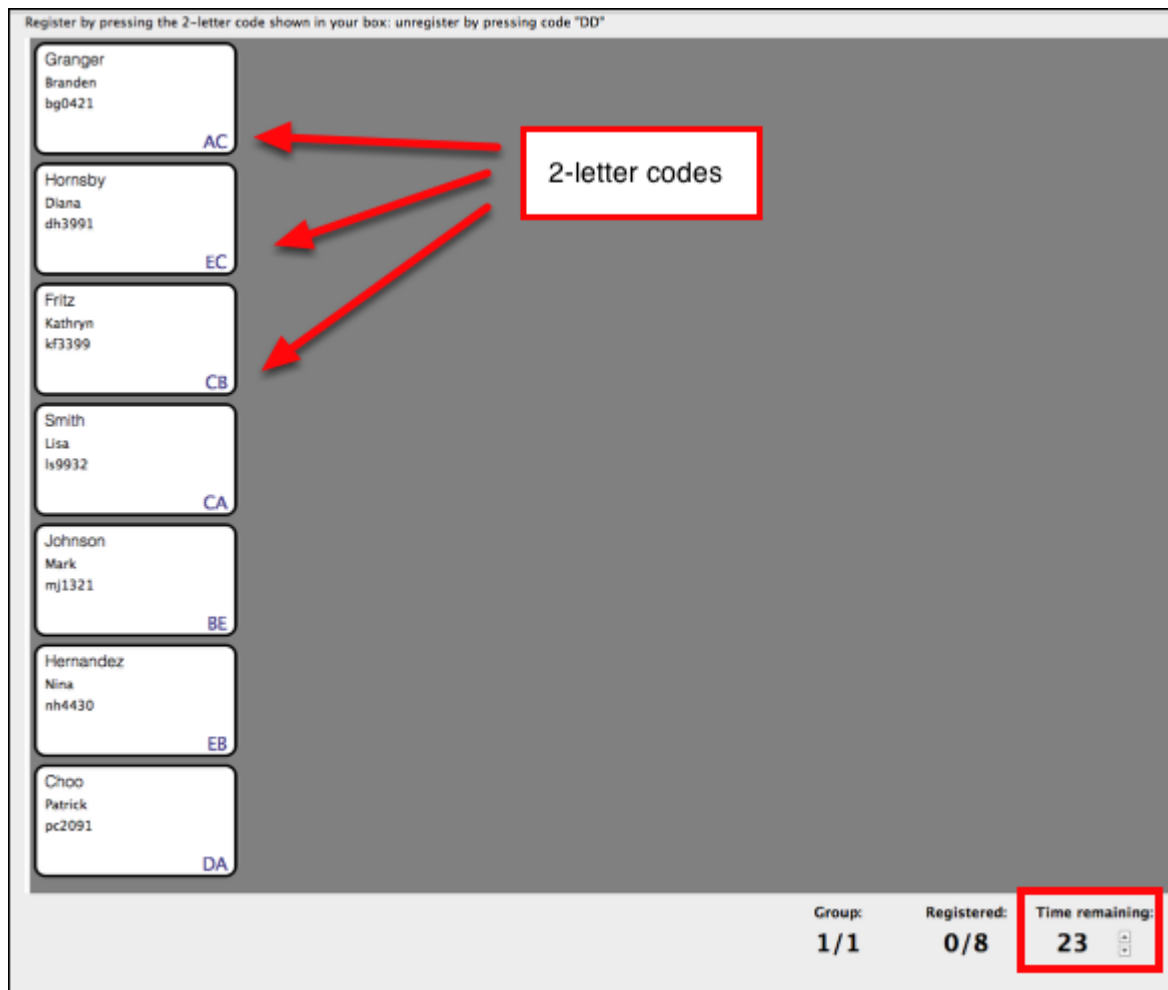

When you choose to start a new session, the **i>clicker Session Toolbar** appears as shown in the next step.

4.2 Choose the Roll Call Registration option.

Choose the **Roll Call Registration** option by selecting the **Options (gear)** button on the **Session Toolbar**.

4.3 Instruct students to use their clickers to enter the 2-letter code next to their name.

A roll call window appears showing each student name, ID, and a 2-letter code. By default, the block flashes green to show the code was received. The block then turns grey to show the remote has been registered.

If there are more students in your course than will fit on the screen, the screen moves to the next page when the timer reaches zero. The program cycles through all of the students until you close this window.

NOTE: If you are using the roll call method with the web registration process, those students who are already connected to a device appear on a grey background with the

device number shown instead of a code. The student names appearing on a white background are not yet registered and must enter the code.

You can choose to change the setting for the roll call process. For example, you can have the student names disappear from the window (vs. turn green) after a code is entered.

TIP: Students who accidentally register their clicker remote to the wrong name should press **DD** on the remote to clear the incorrect registration and then re-enter the correct code.

4.4 Close the roll call window when you are finished.

4.5 Close the Session Toolbar.

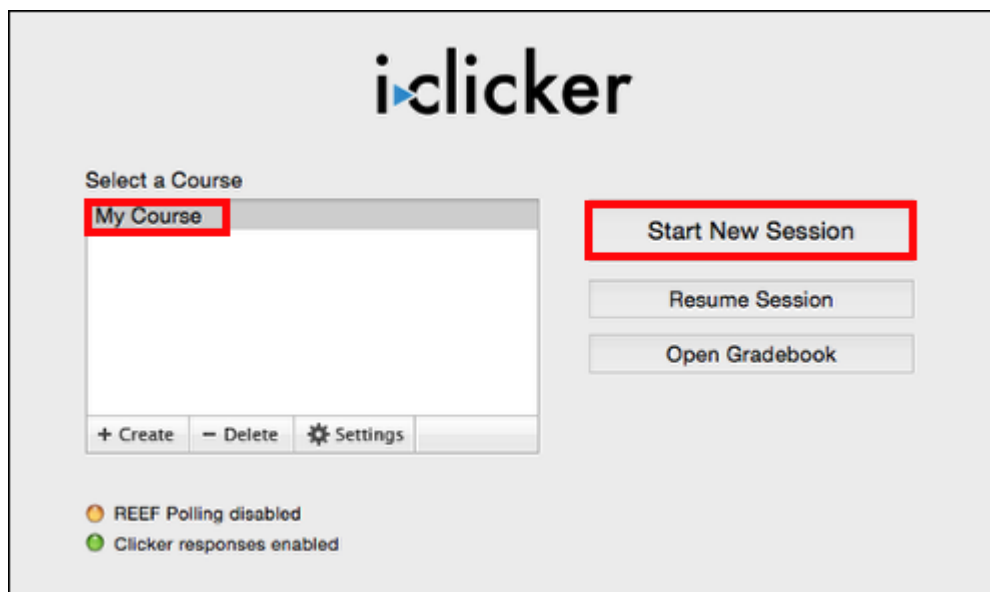

If you plan to administer a poll immediately after registering students, you do not need to close the toolbar. Continue with your class and present polls to your students.

Use i>clicker in Class

Poll students

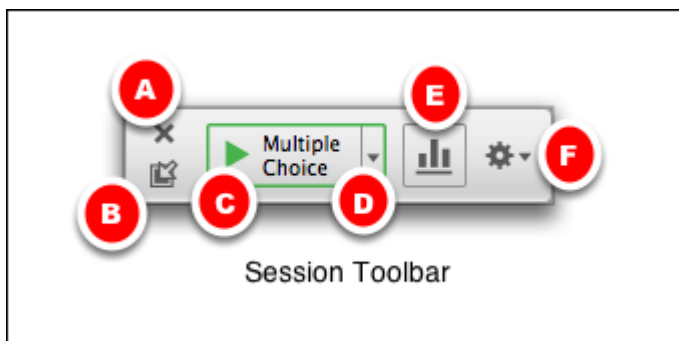

Engage your students in interactive polls during class or use i>clicker to administer a quiz. Follow the steps provided here to poll students.

1. Select a course and choose to start a new session.

The **Session Toolbar** appears in the top left corner of your computer screen (as shown below). You can reposition the toolbar anywhere on your desktop. The floating toolbar allows you to run **i>clicker** with your presentation application(s). For example, if you use PowerPoint or Keynote, both your presentation and the **i>clicker** toolbar will be active. The toolbar floats on top of other applications, such as Word, Acrobat, web browsers, etc. **i>clicker** will take a screen shot of your desktop when polling is started. The screen shot can be viewed in gradebook when polling is over.

IMPORTANT: The **Start New Session** and **Resume Session** options are enabled only if a base station is attached to your computer.

The **Session Toolbar** includes options to perform the following:

A - Close or end the session

B - Minimize and maximize the toolbar

C - Start/stop a poll

D - Select the question type

E - Show/hide the results chart

F - Display the Options menu

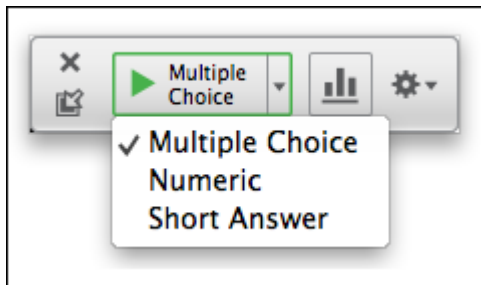

2. Instruct your students to turn on their devices.

NOTE: If your base station is not set to the default frequency **AA**, instruct students to change the channel on their **i>clicker** devices.

3. Present a question to the class.

Present questions to the class verbally or using a projector. You can use any program (e.g., PowerPoint, Keynote, Google Docs, Word, Acrobat, etc.) to present a question to the class. Or, you may choose to verbally present a question. Simply state the question and answers choices.

4. Select the question type (if necessary).

Select the question type from the **Session Toolbar** (if necessary) to match the question presented to the class.

5. Set the polling mode.

i>clicker supports two polling modes--**record voting results** and **anonymous**. The default mode is set to record voting results. You can switch between the modes before you start each question. Select the mode if it is not already set properly for the question. Use the **Options** (gear) menu to turn anonymous polling on/off.

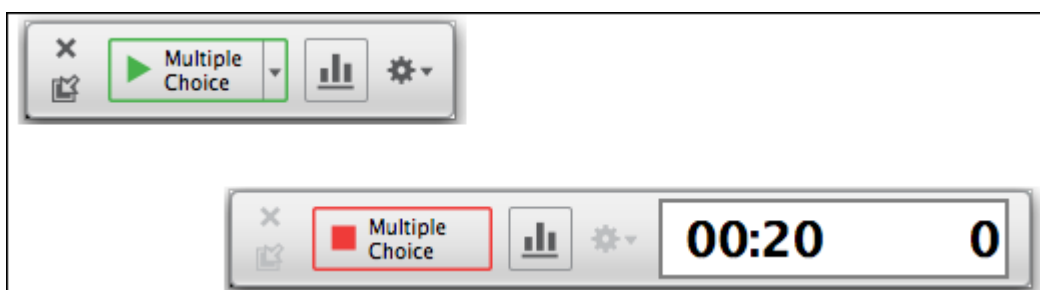

TIP: Anonymous polling questions are ideal, in that, students can respond to sensitive questions without worrying that you can link their responses to their student IDs later. Answers are not associated with a name or ID. Rather, the gradebook results for each student shows an "X" instead of the actual response for that question.

i>clicker does capture the cumulative results so that you know how many students voted for each answer. Participation points may be assigned for these questions. However, the program does not assign performance points since there are no correct answers.

The label **AP mode** appears on the toolbar indicating the **Anonymous Polling** mode is enabled. No label appears when student results are recorded.

6. Press Start (>) to begin a poll.

When polling is active, the **Start (>)** button switches to a **Stop** button and a timer appears. A counter on the far right of the toolbar displays how many students have voted. You can choose to show or hide the results during a poll by pressing the **Chart** button. All other options are disabled during a poll.

TIP: The base station LCD shows the polling results for an active poll. The information shown depends on the base station display settings.

NOTE: **i>clicker** begins collecting votes after you select the **Start** button. On the **i>clicker 1** or **i>clicker + remotes**, a green **Vote Status** light (next to each button) on the students' remotes indicates a response has been successfully recorded. On the **i>clicker 2** remote, a checkmark on the LCD screen indicates that a response has been successfully recorded.

7. Press Stop on the toolbar to end a poll.

NOTE: **i>clicker** stops collecting votes when you choose the **Stop** button. If students attempt to vote when polling is not active, on **i>clicker 1** and **i>clicker + remotes**, the **Vote**

Status light (next to each button) flashes red. On the **i>clicker 2** remotes, a closed session symbol appears on the LCD screen.

8. Choose to view the polling results.

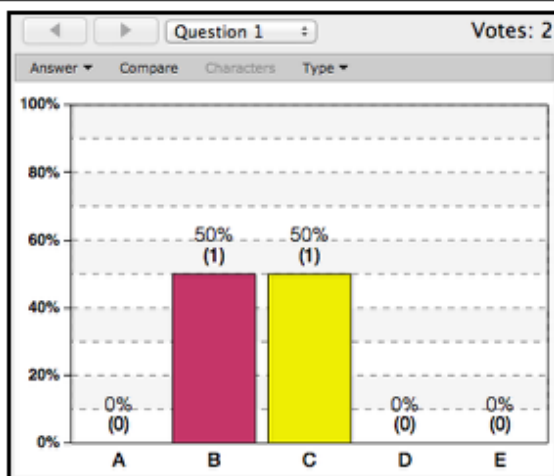

Figure 1 - before correct answer set

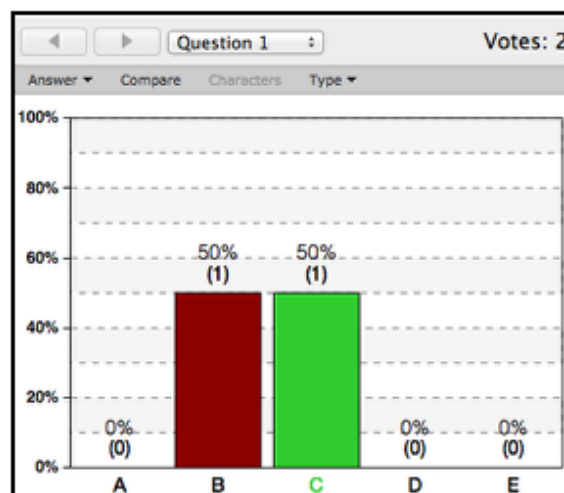

Figure 2 - after correct answer selected

You can choose to show the polling results during or after a poll. Simply select on a bar to select/deselect it as the correct response. Alternatively, choose the correct response from the **Answer** pop-up menu in the top, left corner of the chart window. Before selecting an answer, each bar appears in a different color. After choosing the answer, the correct answer bar appears in green and the other bars appear in red.

Close the window when you are finished viewing the results.

TIP: The chart window includes many options for viewing student results. You can change the default chart settings using the **Course Settings** option.

9. Repeat Steps 3 - 8 for each new question.

10. End the session when you finish asking questions.

Select the **Close (X)** button on the toolbar or choose **Close Toolbar** from the **Options** (gear) menu. The program ends the session, stores the student responses in the gradebook, and displays the **i>clicker** home screen with your courses.

Use the chart options to view the polling results

Display the results chart during a poll or after you stop accepting votes. The program provides several options for viewing the results. For example, you can view multiple charts to compare results to another question. Other options let you set the correct answer, change the chart view, and move from question to question.

Review the options provided in the Results Chart window.

Use the controls in the **Results Chart** window to:

A - Move to the results for the next or previous question

B - Move to the results for a specific question

C - Select the correct answer (or choose the corresponding letter choice or bar)

D - Display a second chart window to compare question results

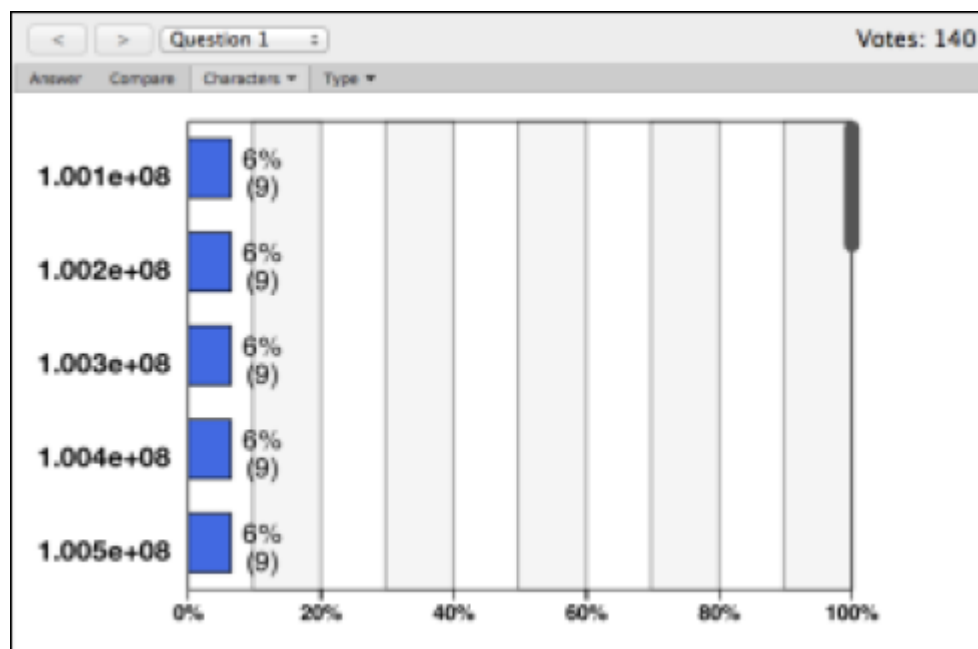

E - Set the number of significant digits -- 1-8 for numeric response questions or 1-16 for short answer

F - Set the graph type (bar chart-vertical or bar chart-horizontal)

Select the **Close** button on the window to close the **Results Chart** window.

TIP: Press the **B** button on the instructor remote to show/hide the results chart. Press the **E** button on your remote to cycle through the choices to designate a correct answer.

Numeric Response

For numeric results charts, the results appear on a vertical bar chart in numeric order (default) or a histogram. Choose **Answer** to select one or more correct responses. Select **Characters** to set the number of significant figures, or characters, to show in the chart.

Short Answer

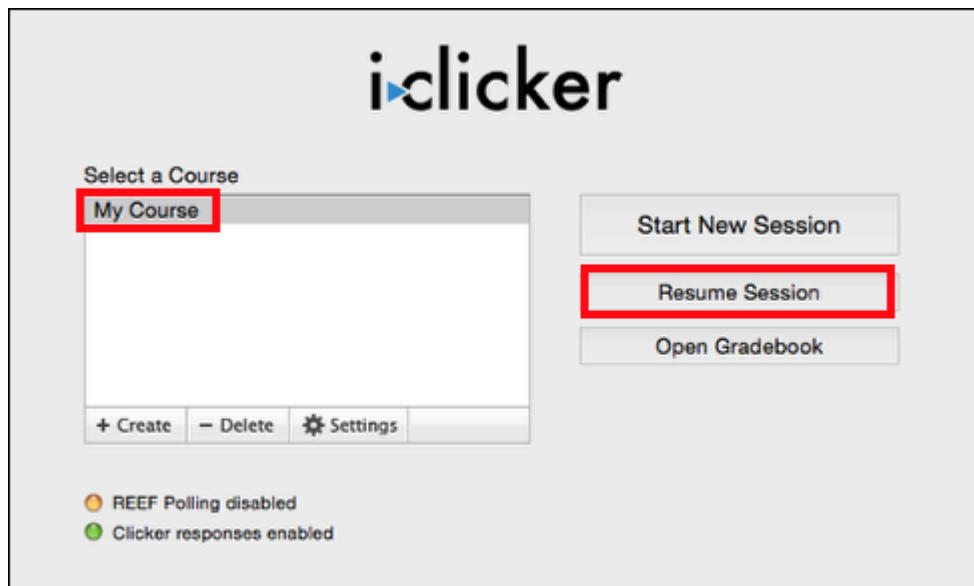

Short answer (alphanumeric) results charts can only be viewed as a vertical bar chart. To view more results, drag the scroll bar down. Select the **Characters** menu to change the number of characters that appear on the chart.

TIP: Changing the number of characters is particularly useful for ranking and grouping responses. For example, three students provide the following answers to a ranking question: **ABCDE**, **ABEDC**, **BCEDA**. With five or more significant characters selected, each of these answers appears separately in the bar chart. By changing the significant characters to one, you can group the students by their first choice. In this example, changing the significant characters to one displays two bars on the chart.

Resume a session

The **Resume Session** option is useful if you accidentally end a session or could not finish a session during class and want to continue the session another day. Choose **Resume Session** to resume the most recent session.

1. Select a course and choose to resume a session.

The i>clicker program resumes the most recent session and displays the **Session Toolbar**.

2. Continue the polling session.

The program appends results for additional questions into the gradebook for the most recent session.

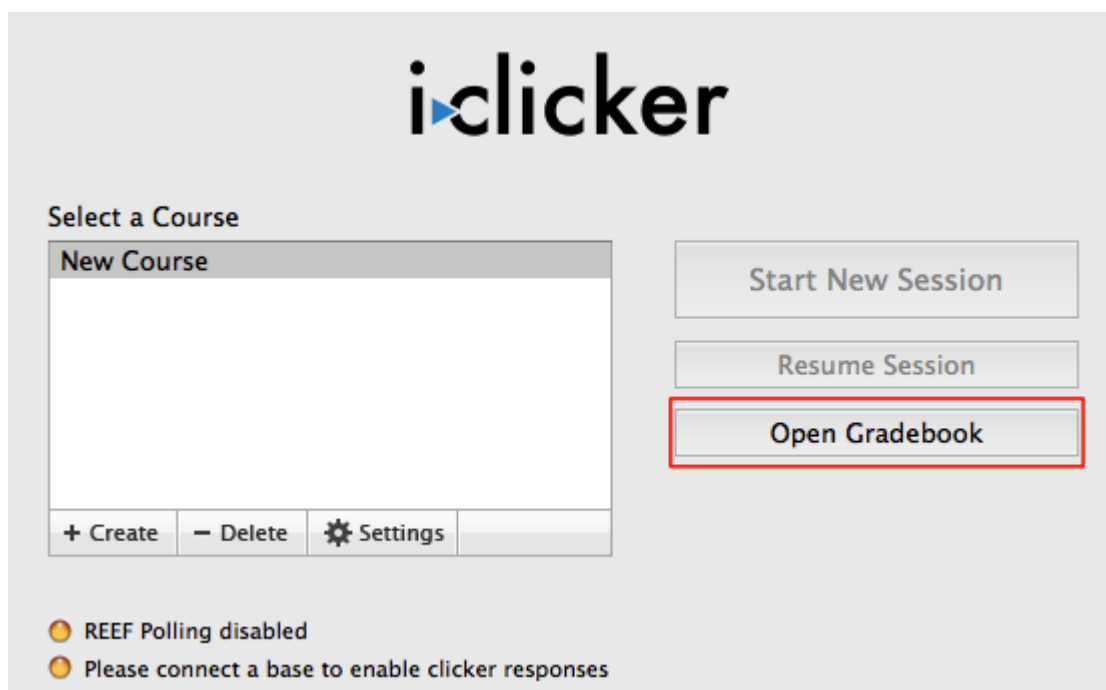

3. End the session when you finish polling your students.

Grade and View Student Results

Take a quick look at the gradebook

The i>clicker gradebook provides access to all of the polling results for a course. Here you can view student results, edit performance/participation points, manage unregistered clickers, generate reports, and export results.

1. Select a course and choose to open the gradebook.

Simply choose a course and select **Open Gradebook** to view/edit the polling results for your students.

2. Review the gradebook options and student results data.

The screenshot shows the i>clicker gradebook interface. At the top, there are four callouts: A (Settings icon), B (Reports icon), C (Export icon), and D (Sync icon). Below these is a table with columns: Name, Course Average, Course Total, Performance Total, Participation Total, and Session 1 5/27/14. A red box labeled E encompasses the first five columns. A red box labeled F encompasses the Session 1 column. The table data is as follows:

Name	Course Average	Course Total	Performance Total	Participation Total	Session 1 5/27/14
					View
Possible Points		10.00	10.00	0.00	10.00
Average Points		8.29	8.29	0.00	8.29
Average %		82.9%	82.9%	0%	82.9%
#45dd3931	90%	9.00	9.00	0.00	9.00
Fritz, Kathryn	70%	7.00	7.00	0.00	7.00
Granger, Branden	80%	8.00	8.00	0.00	8.00
Hernandez, Nina	80%	8.00	8.00	0.00	8.00
Hornsby, Diana	0%	0.00	0.00	0.00	Ab
Choo, Patrick	70%	7.00	7.00	0.00	7.00

When you open a gradebook, i>clicker displays a window that shows your student roster, summary data, and session results. The summary data includes the course average, course total points possible, performance total points, and participation total points.

A - Change the default **Scoring** settings for all new sessions

B - Generate session and summary reports

C - Export session results to a general- or LMS-formatted file

D - Synchronize unregistered clickers

E - Summary results data for all sessions

F - Session results (session summary and student scores) -- **Ab** indicates student absent and/or did not respond to any questions in that session

NOTE: If you are set up to sync with an LMS, two buttons appear--**Sync Roster** and **Sync Scores**.

NOTE: Students using REEF, i>clicker's mobile app, will appear as "Unknown REEF User" in your roster until a) they have entered their student ID (as it appears in your roster) in their REEF profile and b) you have synchronized your roster by clicking the "Sync" icon.

3. Review the session details window.

The screenshot displays the i>clicker Session Details window. At the top left, there are two tabs: 'Summary' (marked with a red circle A) and 'Scoring' (marked with a red circle B). The 'Scoring' tab is active. On the left side, there are three question cards: 'Question 1' (marked with a red circle C), 'Question 2', and 'Question 3'. The 'Question 1' card is selected and expanded, showing its details. At the top right of the 'Question 1' details, there are two buttons: 'Delete Question' (marked with a red circle D) and 'View Chart' (marked with a red circle E). Below these buttons, the question type is 'Multiple Choice' and the correct answer is shown in a text box. A table below shows the results for each response option (A, B, C, D, E). The table has columns for 'Response', 'Vote %', 'Votes', and 'Points'. Response B is highlighted in red, indicating it is the correct answer. At the bottom right, there is a red circle F next to a 'View Chart' button.

✓	Response	Vote %	Votes	Points
<input type="checkbox"/>	A	0%	0	0.00
<input type="checkbox"/>	B	100%	2	0.00
<input type="checkbox"/>	C	0%	0	0.00
<input type="checkbox"/>	D	0%	0	0.00
<input type="checkbox"/>	E	0%	0	0.00

When you choose the **View** option for a session, a **Session Details** window appears as shown in the example above. A screen capture is shown for each of the questions presented during a session.

A - View the session summary, change the session name, and delete a session

B - View/edit the session scoring (performance and participation points)

C - Set the correct response, view voting details, and specify performance points awarded for the selected question

D - Delete current question (marks question as deleted and removes from results calculations)

E - View a results chart for a question

F - Move to next and previous questions

View session results, set correct responses, and update points awarded

After you complete a session, use the gradebook to view the results for a polling session.

If you already set correct responses during the session, it is not necessary to make those updates now.

However, if you did not indicate some or all of the correct responses, you must assign correct answers before students receive points for their responses.

If you did not set the default scoring settings, adjust the scores following these instructions. Make changes to the points for one question, a few, or all of them. For example, upon review you can assign more points for an especially difficult question.

1. Open the course gradebook and review session results.

Name	Course Average	Course Total	Performance Total	Participation Total	Session 1 5/27/14
					View
Possible Points		10.00	10.00	0.00	10.00
Average Points		8.29	8.29	0.00	8.29
Average %		82.9%	82.9%	0%	82.9%
#45dd3931	90%	9.00	9.00	0.00	9.00
Fritz, Kathryn	70%	7.00	7.00	0.00	7.00
Granger, Branden	80%	8.00	8.00	0.00	8.00
Hernandez, Nina	80%	8.00	8.00	0.00	8.00
Hornsby, Diana	0%	0.00	0.00	0.00	Ab
Choo, Patrick	70%	7.00	7.00	0.00	7.00

The gradebook shows the possible points for each session, average points, and average percent score.

To review the session results, scroll through the student responses. The points shown include the earned performance points and participation points (if any). An **Ab** indicates that the student was absent or did not respond to any of the questions.

Student names appear in blue if a clicker is registered to that student. Any unregistered clickers (e.g., **#45dd391**) appear in red. Results are recorded for unregistered clickers and can be assigned to a student after a polling session. Select (double-click) an unregistered clicker to assign the clicker to a student.

NOTE: You cannot use the gradebook to manually edit an individual student's results. If you export results to an LMS or another gradebook, you can change them using that program.

2. Review/update the correct responses for a session.

To assign points for a polling session, you must identify the correct responses. If you did not select the answers during the poll, follow these instructions.

2.1 Choose View to display the Session Details window.

The top screenshot shows a gradebook table with columns: Name, Course Average, Course Total, Performance Total, Participation Total, and Session 1 5/27/14. A red box highlights the 'View' link in the Session 1 column for the first student row. A red arrow points from this link to the bottom screenshot.

The bottom screenshot shows the 'Session Details Window' for 'Question 1'. It displays the question type as 'Multiple Choice' and the correct answer as 'B'. A table shows the results for five responses (A, B, C, D, E), with response B selected and highlighted in green, showing 100% votes and 1.00 points.

✓	Response	Vote %	Votes	Points
<input type="checkbox"/>	A	0%	0	0.00
<input checked="" type="checkbox"/>	B	100%	2	1.00
<input type="checkbox"/>	C	0%	0	0.00
<input type="checkbox"/>	D	0%	0	0.00
<input type="checkbox"/>	E	0%	0	0.00

Session Details Window

Locate the session in the gradebook and select the corresponding **View** option.

2.2 Select the correct response for each question.

While viewing the question details, you can change the points awarded for a single question by selecting (double-clicking) the points shown for a correct response. However, refer to the instructions in Step 3 to change the points for all of the questions in a session.

TIPS:

- Choose **Delete Question** to remove a question. The question is still shown, but the results are not used in the student or summary results calculations after the question is deleted.
- Choose **Undelete Question** if you accidentally delete a question or want to include the results for a deleted question in the summary calculations.
- Double-click a screen capture image to view it in full-screen mode.
- Select **Summary** to view a session summary or edit a session title.

3. Update the point settings for all questions in a session.

If you have not specified the performance points and participation points, you can change the point settings and apply them to all of the questions in a session.

3.1 Select the Scoring option in the Session Details window.

3.2 Set the participation and performance point settings.

The screenshot shows a 'Session Scoring' window with two main sections: 'Participation' and 'Performance'.

Participation:

- Participants will earn participation points when they respond to .
- Participation points are awarded all or nothing for each polling session.

Performance:

- Points for responding
- Points for correct response
- Total possible points per question

☐ Limit the total performance points earned in a session to:

Buttons: Cancel, Done

IMPORTANT: Any changes made here in the **Session Scoring** window apply only to the current session. Use the **Settings** option on the gradebook home page to change the default settings for any NEW sessions.

Participation points: Awarded to students who attend and vote during lecture (encouraging student engagement). To earn the session participation points, students must respond to a certain percentage of questions in a session. Depending upon the total number of questions, **i>clicker** automatically calculates the minimum number of responses needed. Example: If you select the *all but one question* option and there were 10 questions in a session, a student must respond to at least 9 of the 10 questions (correctly or incorrectly) to earn the participation points.

Performance points: Awarded to students by question for specific answers. Set the number of points earned for students who respond and/or select a correct response. You may also choose to set a limit for the total performance points awarded in a session.

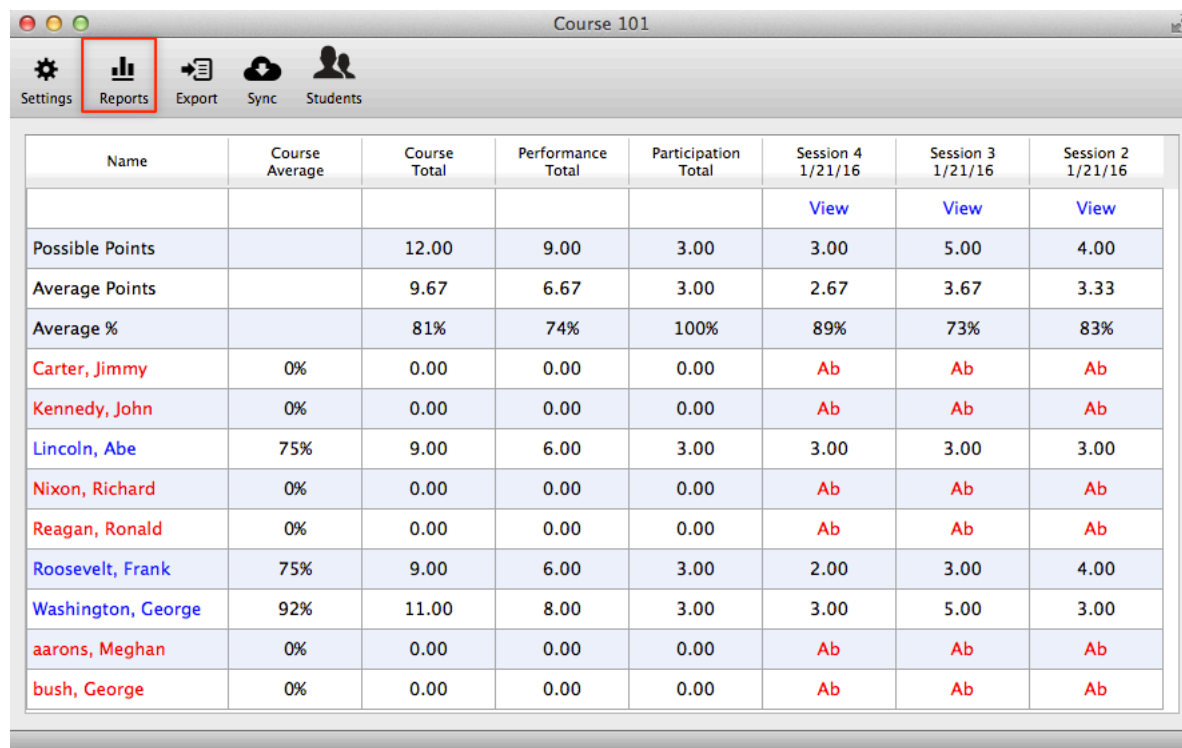

4. Close the Session Details window to save the changes.

Generate reports

Using *i>clicker* you can prepare overall, session, and student summary reports. Reports can be saved in Excel or HTML format (with version 7.5.0 and above).

NOTE: Microsoft Excel or another spreadsheet program capable of reading .xlsx formatted files is required if you choose to save as Excel. Use a spreadsheet application to open, review, print, and update the results.

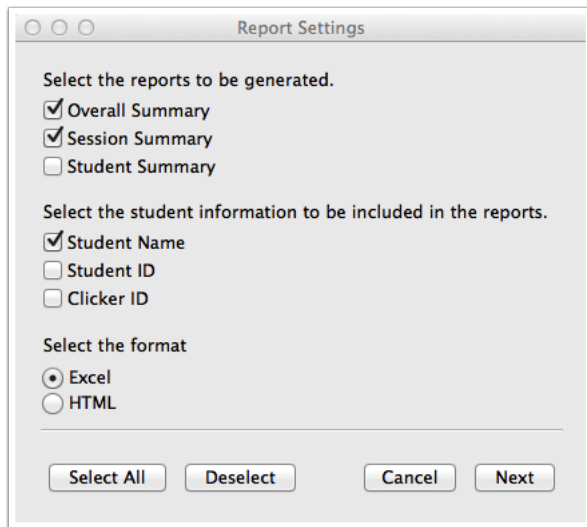

1. Open the course gradebook and choose the Reports option

The screenshot shows the i>clicker interface for 'Course 101'. The top navigation bar includes 'Settings', 'Reports' (highlighted with a red box), 'Export', 'Sync', and 'Students'. Below the navigation bar is a table displaying course statistics and student performance.

Name	Course Average	Course Total	Performance Total	Participation Total	Session 4 1/21/16	Session 3 1/21/16	Session 2 1/21/16
					View	View	View

Select All Deselect All

Cancel Next

2.2 Choose where you would like to save your report(s)

By default, reports are saved in the Reports folder located inside the class folder.

3. Open and view reports

3.1 Overall Summary Report

The overall summary report shows a summary of sessions for the course, including the number of students who voted in class and the number of questions asked. If you also generated session summary reports, the sessions listed in the Name column will appear as hyperlinks. Clicking on the hyperlink will open the respective session summary report.

3.3 Session Summary Report - Question View

The question tab shows detailed information about a specific question in a session. It shows how each student answered; incorrect answers appear in red in the response column. A screen capture of the instructor's desktop during polling is shown, as well as the results cart for the question.

Delete a session

*Using **i>clicker** you can easily delete a session and all of the results. You may find it necessary to delete a session for a variety of reasons. For example, perhaps you were learning how to use **i>clicker** and created a sample session, or you accidentally started a session in a class.*

1. Select a course and open the gradebook.
2. Choose View to display the Session Details window.

The image shows two screenshots from the iClicker 7.6 software. The top screenshot displays the 'Gradebook' window with a table of student performance. A red box highlights the 'View' link in the 'Session 1 5/27/14' column, and a red arrow points from it to the bottom screenshot.

The bottom screenshot shows the 'Session Details Window' for 'Question 1'. It displays the question type as 'Multiple Choice' and the correct answer as 'B'. A table shows the results for each response option.

✓	Response	Vote %	Votes	Points
<input type="checkbox"/>	A	0%	0	0.00
<input checked="" type="checkbox"/>	B	100%	2	1.00
<input type="checkbox"/>	C	0%	0	0.00
<input type="checkbox"/>	D	0%	0	0.00
<input type="checkbox"/>	E	0%	0	0.00

Session Details Window

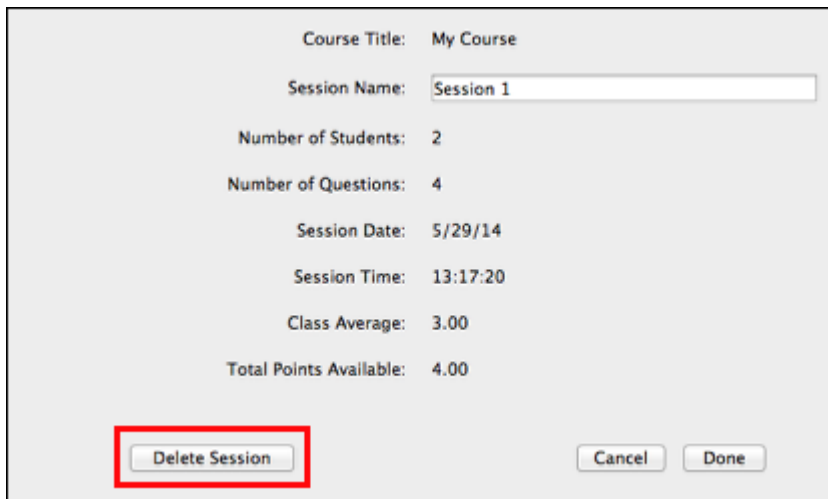

3. Select the Summary option.

Select the **Summary** option that appears in the upper, left corner of the **Session Details** window (shown in Step 2).

4. Choose to delete the session.

IMPORTANT: Verify that the correct session is shown in the **Session Summary** window. Then, choose to delete the session and all of the student results data. This process cannot be reversed.

A screenshot of a "Session Summary" window. The window has a light gray background and contains the following text: "Course Title: My Course", "Session Name: Session 1" (with "Session 1" in a text input field), "Number of Students: 2", "Number of Questions: 4", "Session Date: 5/29/14", "Session Time: 13:17:20", "Class Average: 3.00", and "Total Points Available: 4.00". At the bottom left, there is a button labeled "Delete Session" which is highlighted with a red rectangular border. To its right are two buttons labeled "Cancel" and "Done".

Update or delete a student record

Within the *i>clicker* gradebook, you can edit clicker assignments for a student and delete student records.

NOTE: If you notice that a student name or ID is incorrect, you cannot change it in the gradebook. Depending on how you prepared the roster, you need to update that information in your LMS or in the *roster.txt* file.

1. Select a course and open the gradebook.
2. Select (double-click) a student name to view the Student Details window.

The screenshot displays the i>clicker gradebook interface. At the top, there are navigation icons for Settings, Reports, Export, and Sync. Below these is a table with three columns: Name, Course Average, and Course Total. The table lists several students, including Fritz, Kathryn; Granger, Branden; Hernandez, Nina; Hornsby, Diana; Choo, Patrick; and Smith, Lisa. A red arrow points from the 'Granger, Branden' entry in the table to a 'Student Details' window on the right. This window shows the student's information: Student ID: bg0421, First Name: Branden, Last Name: Granger, and Email: (empty). It also lists 'Registered i>clicker IDs' with the ID 86DD7922. At the bottom of the window are buttons for 'Delete Student', 'Cancel', and 'Save'.

Name	Course Average	Course Total
Possible Points		10.0
Average Points		8.29
Average %		82.9%
#45dd3931	90%	9.0
Fritz, Kathryn	70%	7.0
Granger, Branden	80%	8.0
Hernandez, Nina	85%	8.5
Hornsby, Diana	75%	7.5
Choo, Patrick	80%	8.0
Smith, Lisa	100%	10.0

Student ID: bg0421
First Name: Branden
Last Name: Granger
Email:

Registered i>clicker IDs:
86DD7922

Buttons: Add, Remove, Delete Student, Cancel, Save

3. Update the student record as needed.

Use the options in the **Student Details** window to add/remove clicker IDs for a student. If a student drops your class and you want to purge that student and all of the session results from the gradebook, choose the **Delete Student** option.

TIP: If you notice an error with the student name or ID, you must change that information in the roster.txt file or the learning management system, and then choose to sync the gradebook.

Export polling results

Exporting the student polling results creates a comma-separated values (.csv) file that can be opened by a spreadsheet program or imported into another program such as a learning management system (LMS).

1. Open the course gradebook and choose the Export option.

Settings	Reports	Export	Sync
Name	Course Average	Course Total	
Possible Points		10.00	
Average Points		8.29	
Average %		82.9%	
#45dd3931	90%	9.00	
Fritz, Kathryn	70%	7.00	
Hernandez, Nina	80%	8.00	

2. Choose the session(s) to export.

Select session(s) to export.

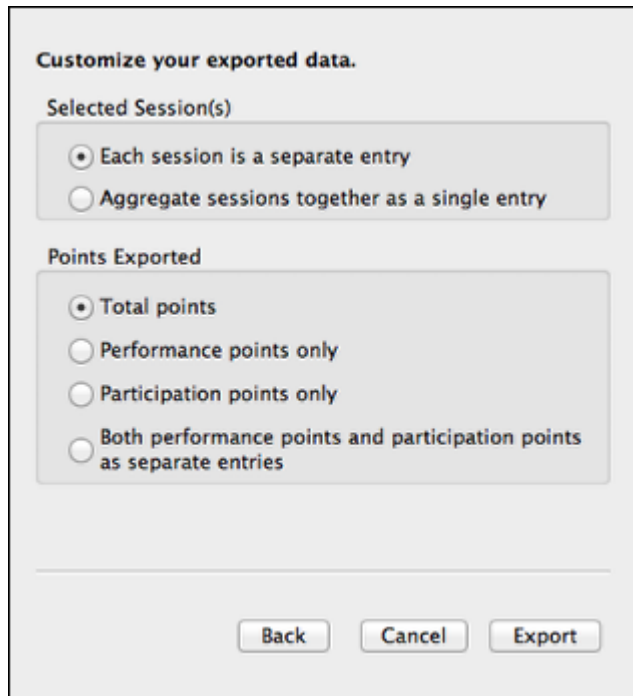

File Format: General

Session Title	Date
<input type="checkbox"/> Session 6	June 30, 2014, 2:56 PM
<input type="checkbox"/> Session 5	June 30, 2014, 2:56 PM
<input type="checkbox"/> Session 4	June 30, 2014, 2:56 PM
<input type="checkbox"/> Session 3	June 30, 2014, 2:56 PM
<input type="checkbox"/> Session 2	June 30, 2014, 2:56 PM
<input type="checkbox"/> Session 1	June 30, 2014, 2:56 PM

After selecting the session(s), select **Next** to continue the process.

Note: if you would like to export your session data for use with your LMS, please check to make sure you have selected your LMS from the Gradebook tab of Settings. The selected LMS will appear next to "File Format" (as shown above). For example, if you choose Blackboard as your LMS in Settings, Blackboard will be listed as the file format in the export window.

3. Set the export options and then choose to export the results.

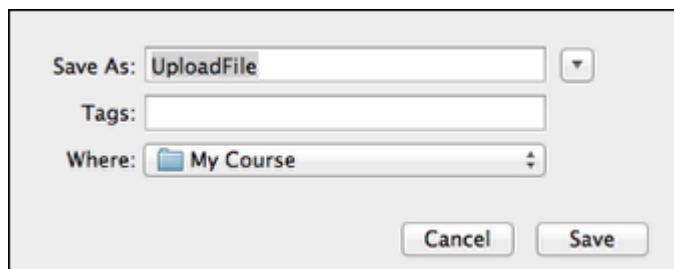

The dialog box is titled "Customize your exported data." It contains two sections. The first section, "Selected Session(s)", has two radio button options: "Each session is a separate entry" (which is selected) and "Aggregate sessions together as a single entry". The second section, "Points Exported", has four radio button options: "Total points" (selected), "Performance points only", "Participation points only", and "Both performance points and participation points as separate entries". At the bottom of the dialog are three buttons: "Back", "Cancel", and "Export".

If you selected more than one session, you can export each session as a separate entry or aggregate the sessions together. The latter option is useful if you want to record one cumulative entry for all of the selected sessions.

Choose how you want to export the points earned by each student. For example, export the total points earned or just the performance points.

4. Specify a filename and location for the file then choose to save.

The dialog box is titled "Save As:". It has a text input field containing "UploadFile" and a small downward arrow button to its right. Below this is a "Tags:" label followed by an empty text input field. Below that is a "Where:" label followed by a dropdown menu showing "My Course" with a small upward and downward arrow button to its right. At the bottom are two buttons: "Cancel" and "Save".

Sync your grades and roster with an LMS

The **Sync** options allow you to download your roster from your learning management system (LMS) and upload student results.

IMPORTANT: Refer to the www.iclicker.com website for detailed instructions for your specific LMS.

Settings

Reports

Export

Sync Roster

Sync Scores

Name	Course Average	Course Total	Performance Total	Participation Total	Lecture 5 6/18/14
					View
Possible Points		3.00	3.00	0.00	2.00
Average Points		0.38	0.38	0.00	0.38
Average %		13%	13%	0%	19%

If you are set up to use **i>clicker** with an LMS, the gradebook shows two synchronization buttons--**Sync Roster** and **Sync Scores**. The **Sync Roster** option allows you to download your roster from your LMS into the gradebook. Choose **Sync Scores** to upload polling results from the gradebook to your LMS.

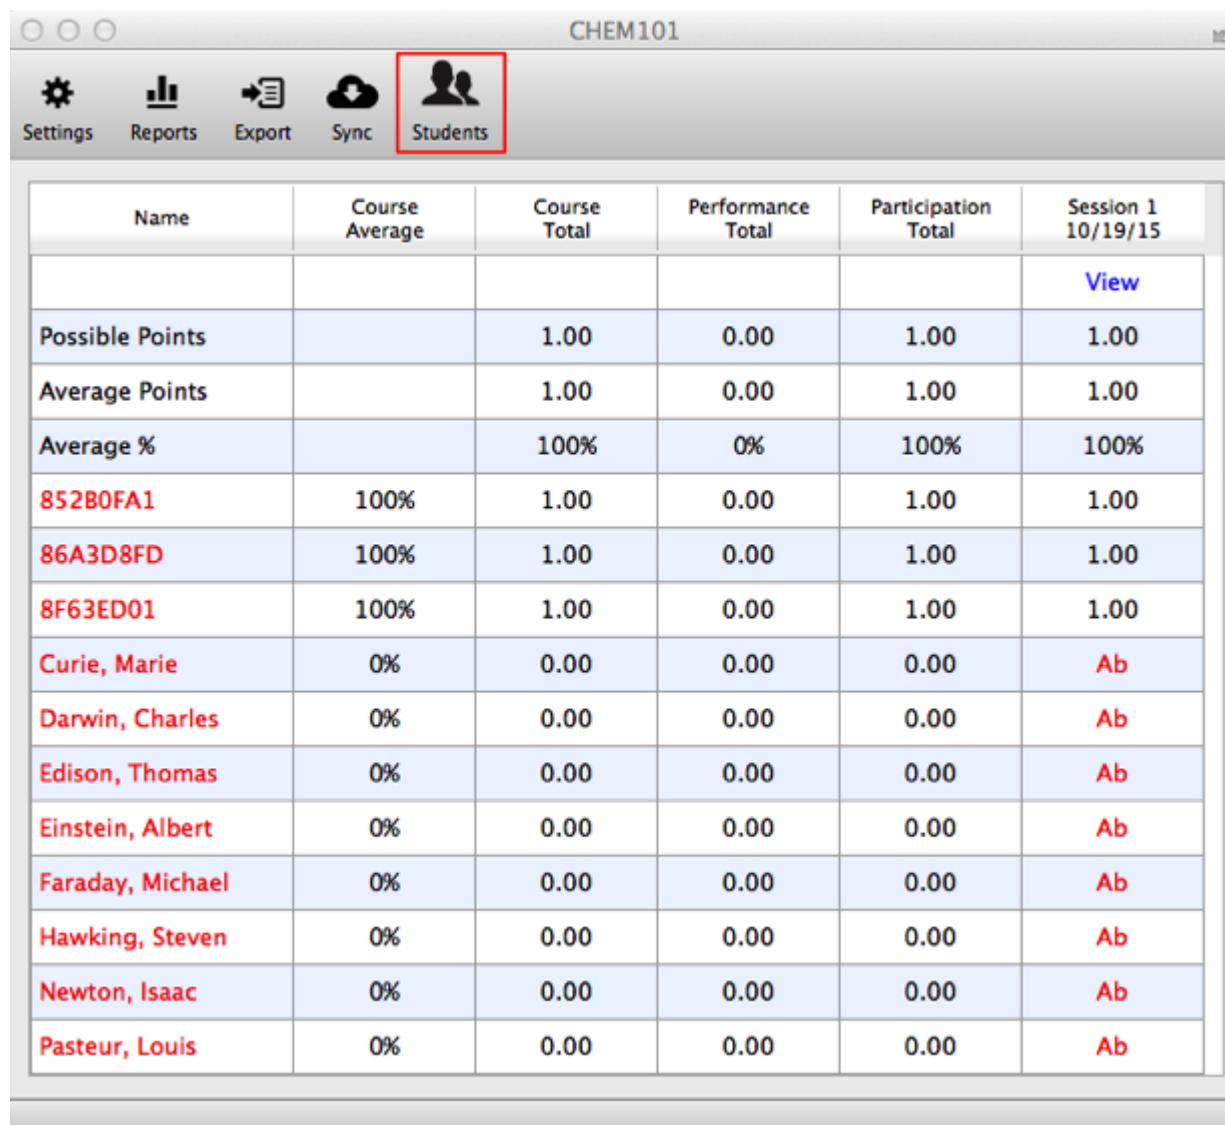

Note: the **Sync Roster** and **Sync Scores** icons are available only if your i>clicker Resources folder contains the necessary file for integrating with your LMS.

When you click **Sync Roster**, i>clicker will communicate with your LMS to find and pull your roster from the LMS into the i>clicker gradebook. If you have not saved your LMS credentials, you will be prompted to enter your credentials.

When you click **Sync Scores**, i>clicker will communicate with your LMS to upload i>clicker polling data into your LMS gradebook. If you have not saved your LMS credentials, you will be prompted to enter your credentials.

View and Export Unregistered Students

1. Click the Student icon in gradebook

The screenshot shows the i>clicker 7.6 interface for course CHEM101. The 'Students' tab is highlighted with a red box in the top navigation bar. Below the navigation bar is a table with columns: Name, Course Average, Course Total, Performance Total, Participation Total, and Session 1 10/19/15. The table lists various students and their performance metrics. A 'View' link is present in the Session 1 column for the first row.

Name	Course Average	Course Total	Performance Total	Participation Total	Session 1 10/19/15
					View
Possible Points		1.00	0.00	1.00	1.00

2. View the Unregistered Clickers

3. Export the list by clicking "Export to TXT"

4. Save the file

Customize Your Course Settings

Update the settings for a course

The i>clicker system is designed to be a simple classroom response system that can be used almost immediately upon launching. However, you may choose to take a little time to customize the software to your course. Settings are course-specific. They are organized into eight tabs as shown in Step 2.

1. Select a course and choose to edit the settings.

Select the **Settings** (gear) button or choose **Course Settings** from the **Course** menu to view the course settings. Here you can review or change the setting for a specific course.

2. Update the course settings.

Use the options provided in the **Course Settings** window shown below to customize your i>clicker experience. Instructions are available for each of the tabs: [General](#), [REEF Polling](#), [Gradebook](#), [Roll Call](#), [Toolbar](#), [Scoring](#), [Results](#), and [Base Display](#).

The screenshot shows a software window titled "General" with several tabs: "General", "REEF Polling", "Gradebook", "Roll Call", "Toolbar", "Scoring", "Results", and "Base Display". The "General" tab is active. It contains three main sections: "General", "Frequency code", and "Regional Settings".

General

Course Name:

Instructor Remote ID: Eight character code on the back of remote

Welcome Message: Displayed on student i>clicker 2 remotes on power up

Frequency code

Subfrequency Code 1: ☐ A ☐ B ☐ C ☐ D

Subfrequency Code 2: ☐ A ☐ B ☐ C ☐ D

When the frequency code is not set to default value AA, show an alert message:

Regional Settings

Choose Language:

☐ Show language selection at start-up

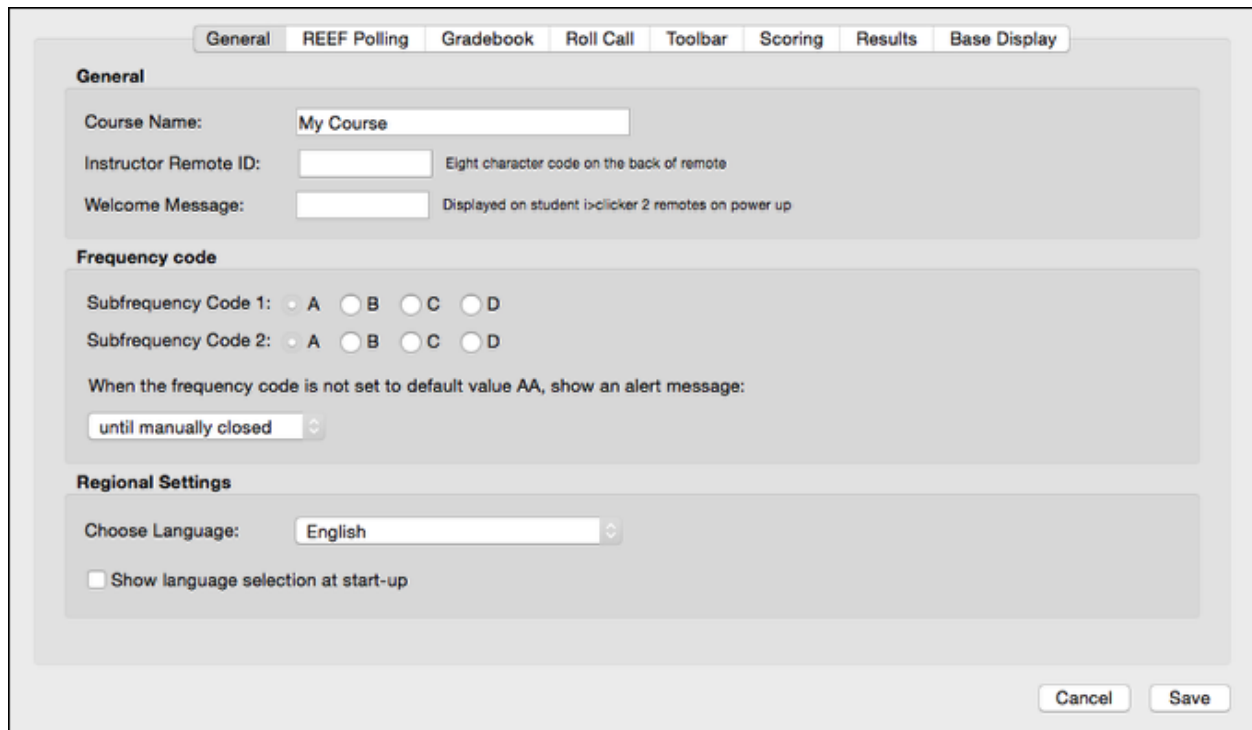

At the bottom right of the window are two buttons: "Cancel" and "Save".

3. Save the changes you set for a course.

General

*The settings on the **General** tab allow you to edit your course name, designate an instructor remote, add a welcome message, change the frequency code, and select the default language.*

1. Select the General tab in the Course Settings window.

The screenshot shows the 'General' tab of the Course Settings window. The window has a title bar with tabs: General, REEF Polling, Gradebook, Roll Call, Toolbar, Scoring, Results, and Base Display. The 'General' tab is active. It contains three main sections: 'General', 'Frequency code', and 'Regional Settings'. In the 'General' section, there is a 'Course Name' field with the text 'My Course', an 'Instructor Remote ID' field with a placeholder text 'Eight character code on the back of remote', and a 'Welcome Message' field with a placeholder text 'Displayed on student i>clicker 2 remotes on power up'. In the 'Frequency code' section, there are two rows of radio buttons for 'Subfrequency Code 1' and 'Subfrequency Code 2', each with options A, B, C, and D. Below these is a label 'When the frequency code is not set to default value AA, show an alert message:' followed by a dropdown menu showing 'until manually closed'. In the 'Regional Settings' section, there is a 'Choose Language' dropdown menu showing 'English' and a checkbox labeled 'Show language selection at start-up'. At the bottom right of the window are 'Cancel' and 'Save' buttons.

2. Specify the General settings for your course.

Enter or edit the general settings: course name, instructor remote ID, and welcome message. Only a course name is required. The other settings are optional.

2.1 Update the course name.

The **Course Name** field shows the name that you entered when you created your course. The program immediately saves changes to the course name upon moving the focus out of the field.

TIP: Your course name does not need to match the official course name used by your school. The **i>clicker** course name is primarily for your reference. If you use **REEF Polling**, students will see this course name to join a session.

2.2 Enter the clicker ID for the instructor remote.

The clicker ID is an 8-character alphanumeric code (e.g., 8561E331) located on the back of the clicker.

You may designate one remote as the instructor remote for your own use in class. The instructor remote controls polling and moves between slides in your presentation software, allowing you freedom to move around the room while conducting **i>clicker** polling sessions.

To activate the instructor's remote, enter the clicker's remote ID in the **Instructor Remote ID** field.

2.3 Enter a welcome message.

The optional welcome message allows you to set an eight-character message that will appear on the LCD screen of your students' **i>clicker2** remotes. For example, you may choose to add your course name as the welcome message (e.g., CHEM301). Students with **i>clicker 2** remotes see the welcome message when they turn on their remotes. The welcome message is a great way to ensure that students are voting in the correct class.

3. Specify the frequency code settings.

The **i>clicker** 2-way radio frequency student response system operates on one of 16 channels in the 900-918 MHz frequency range. The default frequency channel for both the base and the student remote is **AA**. If you are the only instructor using **i>clicker**, you should not modify this frequency. However, if someone else is using **i>clicker** in close proximity, one of you must use a different channel.

TIP: If you use **i>clicker** near another instructor who is using the polling software, we recommend you set your default frequency for the entire term. If **i>clicker** is in use across your institution, you may also need to coordinate frequencies with your IT administrator. They may have already assigned channels to each classroom.

At the beginning of each session, **i>clicker** checks for base stations in close proximity using the same frequency as your setting. If a base nearby uses the same frequency, the program prompts you to change your frequency.

IMPORTANT: If the frequency is not AA, you must instruct students to change the frequency code on their clickers at the beginning of each class

3.1 Change the frequency code if there is a conflict with a nearby classroom.

The screenshot shows the 'General' settings tab of the i>clicker application. The 'Frequency code' section is highlighted with a red box. It contains two rows: 'Subfrequency Code 1' and 'Subfrequency Code 2'. Each row has four radio buttons labeled A, B, C, and D. In both rows, the 'A' radio button is selected. Below this section is a 'Show frequency alert message:' label and a dropdown menu set to 'until manually closed'. The 'Preferences' section at the bottom includes a 'Choose Language:' dropdown set to 'English', a checkbox for 'Show language selection at start-up' which is unchecked, and a checked checkbox for 'Prevent App Nap'. At the bottom right of the window are 'Cancel' and 'Save' buttons.

Use the options to set a new frequency code (e.g., BB).

3.2 Set the frequency code alert message status.

The screenshot shows the 'General' tab of the i>clicker 7.6 settings window. The 'Frequency code' section is highlighted with a red box. The 'Show frequency alert message:' dropdown menu is open, showing options: 'until manually closed' (selected), 'for 30 seconds', 'for 15 seconds', 'for 5 seconds', and 'not at all'. Other visible options include 'Subfrequency Code 1' and 'Subfrequency Code 2' (both set to A), 'Prevent App Nap' (checked), and 'Show language selection at start-up' (unchecked). The 'Course Name' is 'Test' and 'Instructor Remote ID' is empty. The 'Welcome Message' is empty. The 'Language' dropdown is set to 'English'.

You may alter the length of time that the frequency alert warning appears on your screen, or you may choose to disable the warning/change alert completely (so that it never displays).

4. Select the regional settings.

Using the regional settings, you can set the default language and control whether you are asked at start-up to specify the language.

4.1 Specify the default language.

Choose the language from the pop-up menu. The list of supported languages appears in the list.

4.2 Set the option to allow you to change the language at start-up.

If enabled, i>clicker presents a window at start-up that allows you to change the language each time you run the program.

4.3 Optional App Nap Setting

New with version 7.4.2, you can choose to prevent App Nap (for Macintosh) by clicking the "Prevent App Nap" check box. In 7.4.5, this option is checked by default.

The screenshot shows the 'General' settings tab of the i>clicker 7.6 Instructor User Guide. The window has a title bar with tabs: General, REEF Polling, Gradebook, Roll Call, Toolbar, Scoring, Results, and Base Display. The 'General' tab is active. It contains three main sections: 'General', 'Frequency code', and 'Preferences'. The 'General' section has fields for 'Course Name' (My Course), 'Instructor Remote ID' (empty), and 'Welcome Message' (empty). The 'Frequency code' section has radio buttons for 'Subfrequency Code 1' and 'Subfrequency Code 2' (both set to A), and a dropdown for 'When the frequency code is not set to default value AA, show an alert message:' (set to 'until manually closed'). The 'Preferences' section has a 'Choose Language:' dropdown (set to 'English') and a checkbox 'Show language selection at start-up' (unchecked). The 'Prevent App Nap' checkbox is highlighted with a red rectangle. At the bottom right are 'Cancel' and 'Save' buttons.

5. Select another settings tab or choose to save the updates.

REEF Polling

*The **REEF Polling** settings allow you to enable **REEF** for your class. Students can then use their laptop or smartphone with the **REEF** app to respond to polls in your class.*

1. Select the REEF Polling tab in the Course Settings window.

When **REEF Polling** is enabled, the software allows you to start or resume a session without an attached base station. Without a base, students cannot vote using physical clickers and you cannot use an instructor remote.

2. Select the Enable REEF Polling button.
3. Choose to create a REEF instructor account. Or, log in if you already have an account.

The screenshot shows a web form titled "Create My REEF Polling Account". It contains five input fields: "First Name:", "Last Name:", "Email:", "Password:", and "Confirm Password:". Below these fields is a checkbox followed by the text "I agree to the [Privacy Policy](#) and [Terms of Service](#)". At the bottom right of the form are two buttons: "Cancel" and "Create".

- Enter your first name and last name. Students will use the name entered here to find your course.
- Enter your email address.
- Enter and confirm a password.
- Check the box to agree to the Privacy Policy and Terms of Use.

4. Complete the REEF set up process by entering your course details.

Save

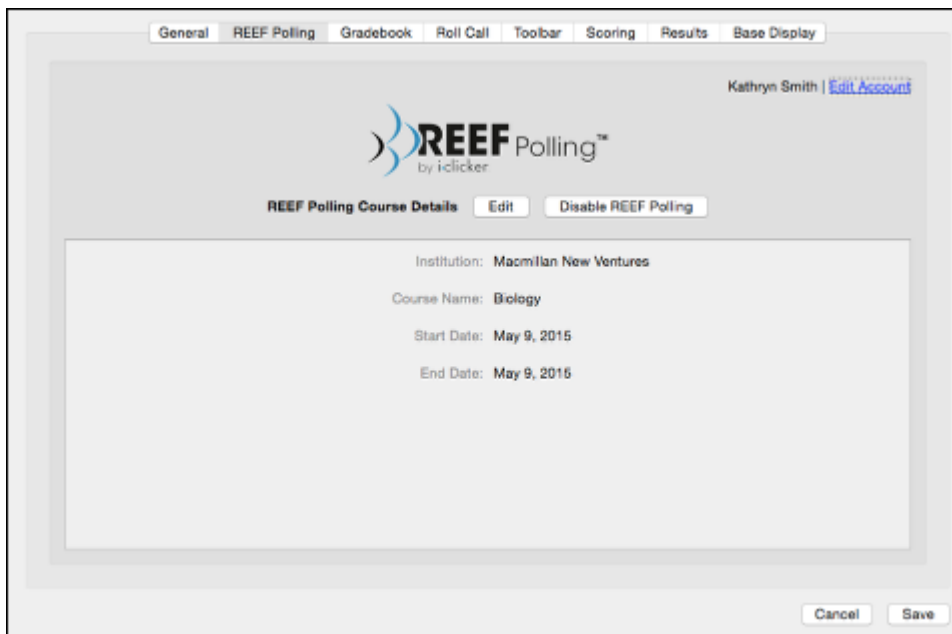

- Enter your institution and course name. We suggest using the same course name as your i>clicker course (from the main course window). The course name you enter here is the course name students will see when finding your course using REEF Polling.
- Set the option to determine when your students will see a screen capture. By default, screen captures of your desktop are NOT sent to students. You can choose to allow

screen shots to students when polling starts or when polling ends. These settings affect the entire course (rather than a particular question or session).

- Optional -- enter the course ID, term, course dates, and meeting times. The additional information makes it easier for your students to find and join your course.
- Choose to create the course.

IMPORTANT: If your institution does not appear in the list, please contact support@iclicker.com. Students must select the institution and course to join a polling session with the **REEF** app.

5. Review the course details and then choose to save the settings.

The screenshot shows a web interface for 'REEF Polling™ by iClicker'. At the top, there is a navigation bar with tabs: General, REEF Polling (selected), Gradebook, Roll Call, Toolbar, Scoring, Results, and Base Display. Below the navigation bar, the user's name 'Kathryn Smith' and a link to 'Edit Account' are visible. The main content area is titled 'REEF Polling Course Details' and includes an 'Edit' button and a 'Disable REEF Polling' button. The form contains the following fields:

- Institution: Macmillan New Ventures
- Course Name: Biology
- Start Date: May 9, 2015
- End Date: May 9, 2015

At the bottom right of the form, there are 'Cancel' and 'Save' buttons.

If you notice an error with the course details or your account information, choose to edit the information. Once you save the settings, **REEF Polling enabled** appears on the main window.

NOTE: Choose the **DisableREEF Polling** button if you no longer plan to have students use **REEF** to respond to your polls.

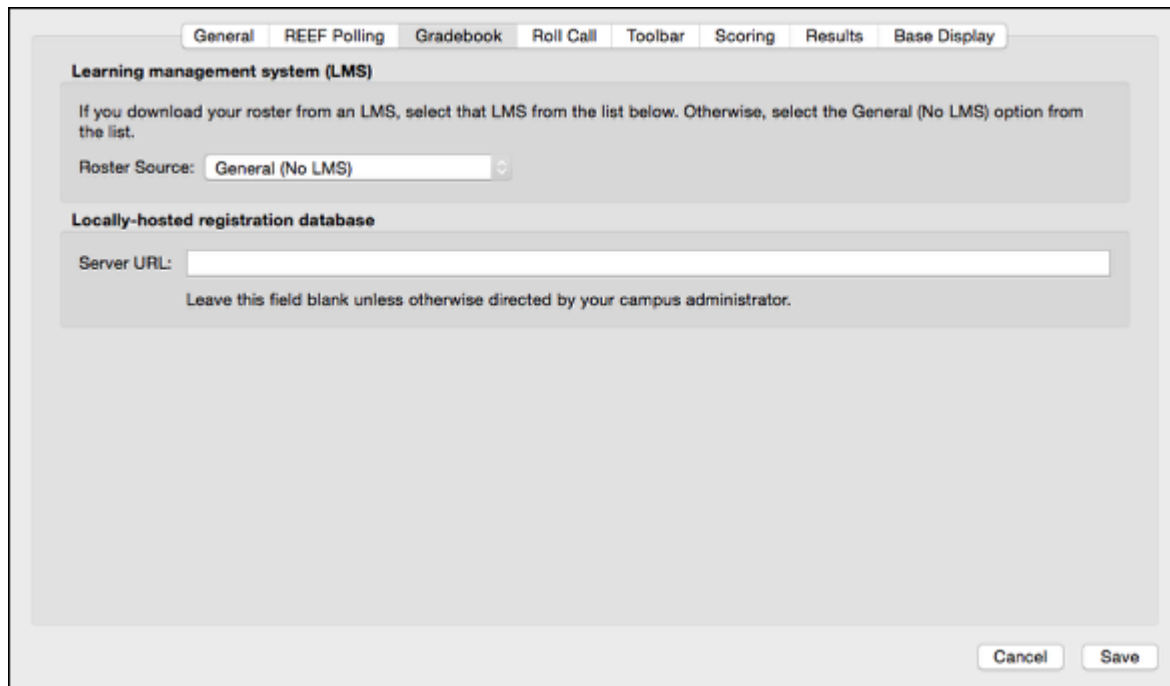

Special considerations:

- Students need to enter their student ID *as it appears in your roster* into their REEF profiles. If students do not enter their student ID in their REEF profile, they will not show as registered in your i>clicker gradebook. They will appear as "Unknown REEF User" until they enter their student ID in REEF (and you synchronize your roster).
- If you resume a session in i>clicker, the session will appear as a new session to REEF students.

Gradebook

Use the Gradebook settings to specify the source for your student roster.

1. Select the Gradebook tab in the Course Settings window.

The screenshot shows the 'Course Settings' window with the 'Gradebook' tab selected. The window has a tabbed interface at the top with the following tabs: General, REEF Polling, Gradebook (selected), Roll Call, Toolbar, Scoring, Results, and Base Display. The main content area is titled 'Learning management system (LMS)'. It contains a text box with the instruction: 'If you download your roster from an LMS, select that LMS from the list below. Otherwise, select the General (No LMS) option from the list.' Below this is a dropdown menu labeled 'Roster Source:' with 'General (No LMS)' selected. Underneath is a section titled 'Locally-hosted registration database' with a text box labeled 'Server URL:' and a note: 'Leave this field blank unless otherwise directed by your campus administrator.' At the bottom right are 'Cancel' and 'Save' buttons.

2. Select the roster source.

This screenshot is similar to the previous one, but the 'Roster Source:' dropdown menu is open, showing a list of options: 'General (No LMS)' (which is checked), 'ANGEL', 'Blackboard Learn', 'Canvas', 'Desire2Learn', 'Moodle', and 'Sakai'. The rest of the window, including the tabs and the 'Locally-hosted registration database' section, remains the same.

If you download your roster from a learning management system (LMS), select that LMS from the **Roster Source** menu.

Select **General (No LMS)** if you are not using a learning management system (LMS).

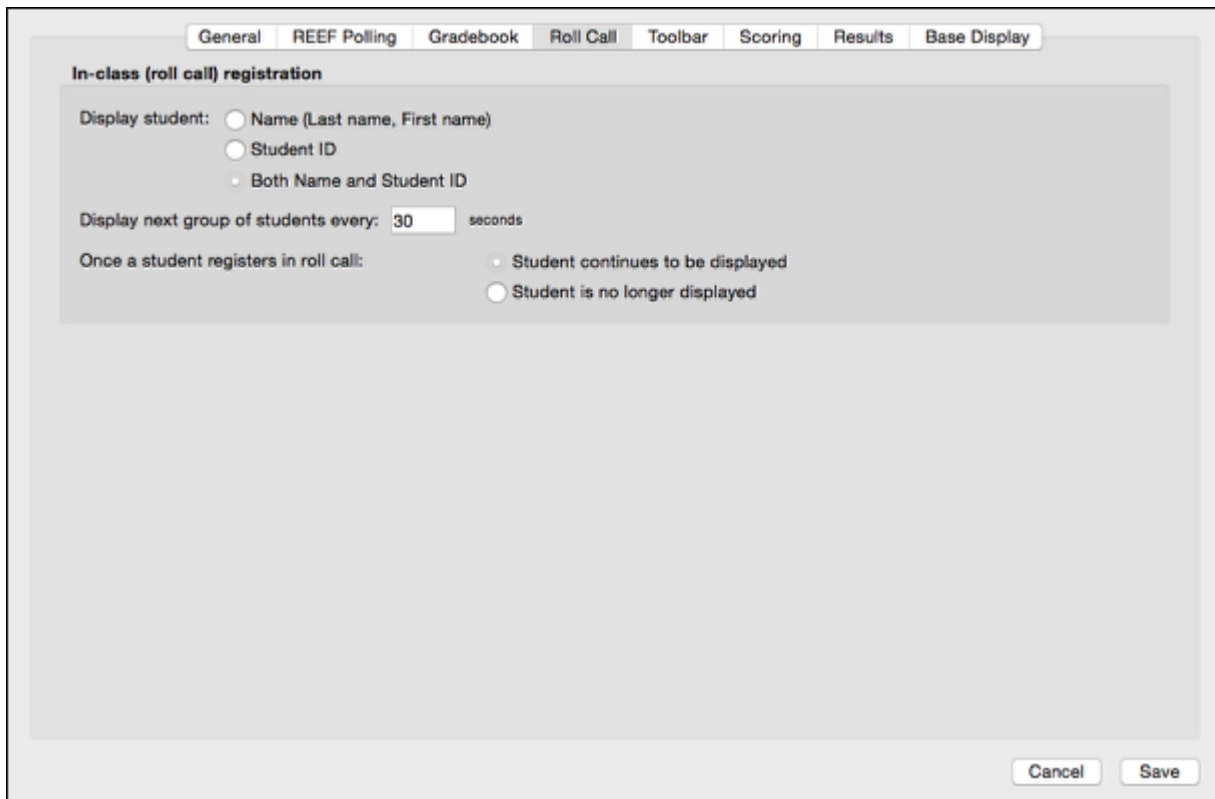

IMPORTANT: Refer to the www.iclicker.com website to access instructions for your specific LMS.

3. Save any changes to the Gradebook settings.

Roll Call

*This setting modifies the way that student names appear on the **Roll Call** window for in-class registration. This option does not modify the format of your roster or gradebook file. See [Prepare your roster](#) for more details on registering students.*

1. Select the Roll Call tab in the Course Settings window.

The screenshot shows the 'Roll Call' tab in the Course Settings window. The window has a title bar with tabs: General, REEF Polling, Gradebook, Roll Call, Toolbar, Scoring, Results, and Base Display. The 'Roll Call' tab is selected. Below the tabs is a section titled 'In-class (roll call) registration'. This section contains three radio buttons for 'Display student:': 'Name (Last name, First name)', 'Student ID', and 'Both Name and Student ID'. The 'Both Name and Student ID' option is selected. Below this is a text input field for 'Display next group of students every:' with the value '30' and the unit 'seconds'. At the bottom of the section are two radio buttons for 'Once a student registers in roll call:': 'Student continues to be displayed' (selected) and 'Student is no longer displayed'. At the bottom right of the window are 'Cancel' and 'Save' buttons.

You can choose to display the student names and IDs in the **Roll Call** window or show both.

Depending on the size of the class (e.g., 30-40 students), all of the student names may not fit in the **Roll Call** window. If that is the case, **i>clicker** displays a new group of students after the time specified. The program cycles through the groups.

When a student successfully registers in roll call, you can choose to show the student name or hide it.

2. Update the roll call options and choose to save the settings.

Toolbar

The Toolbar settings allow you to customize the session toolbar and set the polling timer as count up or count down.

1. Select the Toolbar option in the Course Settings window.

2. Customize the polling toolbar.

The appearance of the session toolbar can be customized to meet your specific needs. Select the toolbar size (Normal or Small) from the drop-down menu.

By default, the toolbar remembers its last location on the screen. You can set the toolbar to reset to its original location by choosing the **Reset location** button.

3. Choose a count-up or count-down timer.

When you start polling, a timer begins. The default **i>clicker** timer counts upward, beginning with zero. In the default setting, you must choose to end polling. You may choose instead to define a countdown timer. To select the count down timer, select the **Count down from** option and set the count down timer start time.

TIP: In countdown mode, the up and down buttons to the right of the timer allow you to add or subtract 15 seconds as needed. You can still stop polling by pressing the **Stop** button on the session toolbar.

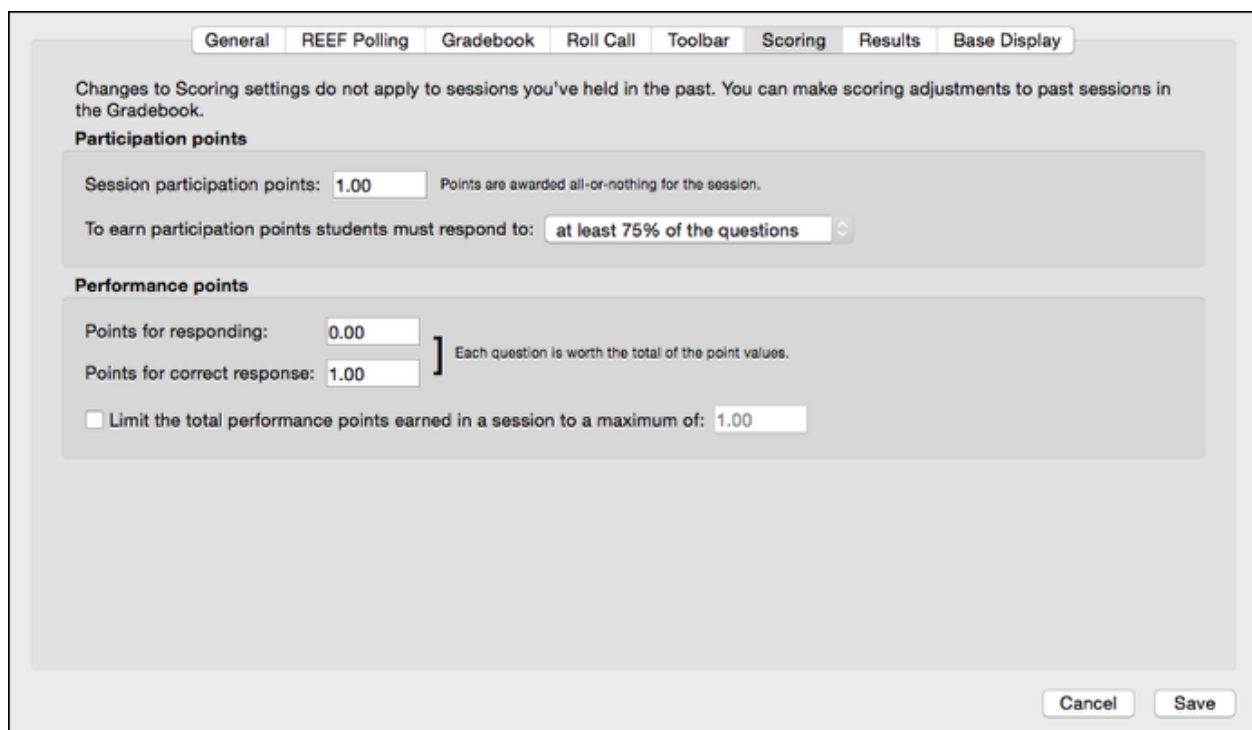

4. Save the settings to record your updates.

Scoring

The **Scoring** settings allows you to establish the point values that students earn for actively participating in class and for answering questions correctly.

IMPORTANT: Any changes made to the **Scoring** settings apply only to new polling sessions. Make adjustments to past sessions using the gradebook.

1. Select the Scoring tab in the Course Settings window.

The screenshot shows the 'Scoring' tab in the i>clicker Course Settings window. At the top, there are tabs for General, REEF Polling, Gradebook, Roll Call, Toolbar, Scoring (selected), Results, and Base Display. Below the tabs, a message states: 'Changes to Scoring settings do not apply to sessions you've held in the past. You can make scoring adjustments to past sessions in the Gradebook.'

Participation points

Session participation points: Points are awarded all-or-nothing for the session.

To earn participation points students must respond to:

Performance points

Points for responding:] Each question is worth the total of the point values.

Points for correct response:

☐ Limit the total performance points earned in a session to a maximum of:

At the bottom right, there are 'Cancel' and 'Save' buttons.

2. Set the participation points options.

The i>clicker program awards participation points to students who attend and vote during lecture (encouraging student engagement). The program awards participation points by overall session activity, not by individual question.

2.1 Set the session participation points.

You can enter the number of points students earn in any given session for meeting the participation requirement, as defined by the criteria set in the next step.

2.2 Set the criteria to receive the participation points.

To earn the session participation points, students must respond to a certain percentage of questions in a session. Depending upon the total number of questions, **i>clicker** automatically calculates the minimum number of responses needed. Example: If you select the ***all but one question*** option and there are 10 questions in a session, a student must respond to at least 9 of the 10 questions (correctly or incorrectly) to earn the participation points.

3. Specify the performance points options.

The program awards performance points to students by question for specific answers. Students can earn performance points without earning participation points, depending on your preference.

3.1 Enter the points the student receives for responding to a question.

This option allows you to enter the default number of points students receive for any answer. These are different from participation points, in that they reward students for performance by question, whereas participation points reward students for participation by session.

3.2 Specify the points awarded for a correct response.

This field allows you to reward students for choosing the correct answer for a question. These points are earned in addition to any performance points you award for simply answering the question.

3.3 Set a limit on the total number performance points a student may earn in a session.

Limit the number of total performance points a student can earn in a single session. Example: if maximum performance points are set at 5 points, and a 10-question session is held with each question worth 1 point, even if a student answers all 10 questions correctly, the most she can earn for that session is 5 points.

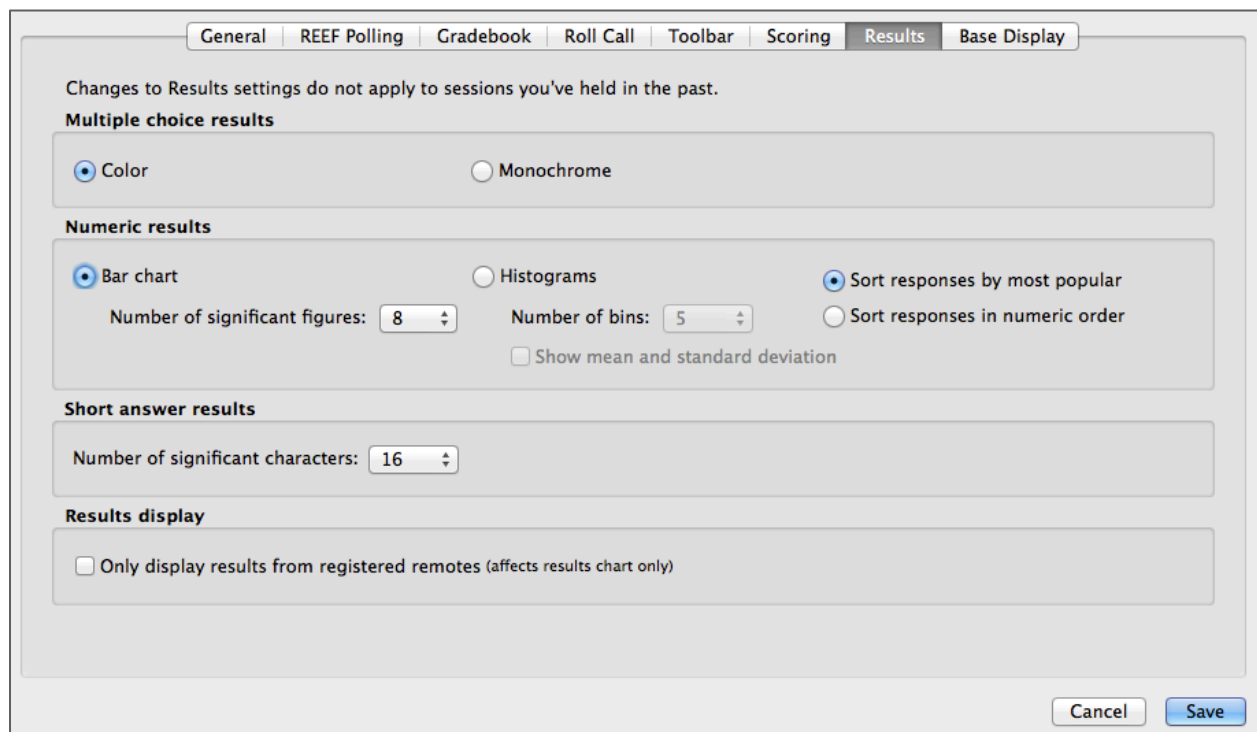

4. Save the updates.

NOTE: Any updates apply **ONLY** to future polling sessions. If you want to change the scoring for a previous session, use the gradebook to make those adjustments.

Results

The **Results** settings allow you to customize the results charts for each question type.

1. Select the Results tab in the Course Settings window.

The screenshot shows the 'Results' tab in the Course Settings window. At the top, there are tabs for General, REEF Polling, Gradebook, Roll Call, Toolbar, Scoring, Results (selected), and Base Display. Below the tabs, a message states: 'Changes to Results settings do not apply to sessions you've held in the past.' The settings are organized into four sections: 'Multiple choice results' with 'Color' selected; 'Numeric results' with 'Bar chart' selected, 'Number of significant figures' set to 8, 'Number of bins' set to 5, 'Sort responses by most popular' selected, and 'Show mean and standard deviation' unchecked; 'Short answer results' with 'Number of significant characters' set to 16; and 'Results display' with 'Only display results from registered remotes (affects results chart only)' unchecked. 'Cancel' and 'Save' buttons are at the bottom right.

2. Choose the chart display setting for Multiple Choice questions.

During polling, a graph displays the results of each question in your session. The multiple choice (A-E) results options allow you to select whether the chart displays as **Color** or **Monochrome**.

3. Specify the chart options for Numeric Response questions

The numeric response chart can be displayed as a vertical bar chart or a histogram.

Bar Chart: The bar chart displays all of the student responses. Set the number of significant figures (characters) that are displayed in the results chart. Changing the characters will

adjust the number of figures/ digits that appear in the students' responses. For example, the student response **21111** when characters set to 2 would appear as **21000** on the results chart.

Histogram: The histogram chart displays the student responses in a histogram. Set the number of bins to adjust the number of vertical bars that appear in the histogram. You may also choose to show the mean and standard deviation.

Sort Responses: You can choose to sort numeric responses by most popular answer or in numeric order. By default, responses are sorted with the most popular answer on top of the results chart. (Note: this option is available starting with version 7.6.0.)

4. Set the number of significant characters for Short Answer questions.

Short answer, or alphanumeric, responses are displayed as a vertical bar chart with the responses sorted by most to least popular. Select the default characters that are displayed in the results chart. Changing the significant characters will adjust the number of characters that appear in the students' responses. For example, the response **CHEMICALS** with significant characters set to 4 would appear as **CHEM**.

TIP: Unless you know that your correct answers will never exceed a certain number of characters, it is recommended that you keep the significant characters default set at 16. You can always decrease the number of significant characters while viewing the student responses in the results chart.

5. Display results from registered remotes only (optional).

You can choose to show results from registered remotes only by checking the box to display results from registered remotes only.

Base Display

*The **Base Display** settings allow you to customize the information that appears on the base/receiver LCD display.*

1. Choose the Base Display tab in the Course Settings window.

The screenshot shows the 'Base Display' tab selected in the Course Settings window. The window has a title bar with tabs: General, REEF Polling, Gradebook, Roll Call, Toolbar, Scoring, Results, and Base Display. The Base Display tab is active. The settings are organized into three sections: Multiple choice display, Numeric response display, and Short answer display. Each section has radio buttons for different display options and a spinner for the update interval in seconds. The Multiple choice display section has three options: 'Show the percentage of votes for each answer choice', 'Show the number of votes for each answer choice', and 'Show the percentage and number of votes for each answer choice (alternating)'. The Numeric response display section has two options: 'Show the percentage of votes for each response' and 'Show the number of votes for each response'. The Short answer display section also has two options: 'Show the percentage of votes for each response' and 'Show the number of votes for each response'. The update interval for all sections is set to 2 seconds. At the bottom right, there are 'Cancel' and 'Save' buttons.

Short answer display

Show the top 2 responses and update the display every 2 seconds

☐ Show the percentage of votes for each response
☐ Show the number of votes for each response

Cancel Save

2. Set the display option for Multiple Choice questions.

During polling, the i>clicker responses display on the receiver LCD in real-time. The LCD display is useful in situations where you want to see how your audience is responding but don't want to make the results viewable to everyone. The following display options are available for multiple choice questions.

- Show the percentage of votes for each answer choice
- Show the number of votes for each answer choice

- Alternate between showing the percentage and number of votes for each answer choice. (With this option selected, you may also choose the amount of time before alternating the display.)

3. Choose the Numeric Response question display settings.

The numeric response display shows the top responses for a polling session. Choose the number of top responses that are displayed and the amount of time each response is shown. You may also choose to show the top responses as percentage of votes or number of votes.

4. Select the base station display setting for Short Answer questions.

The short answer response display shows the top responses for a polling session. Select the number of top responses that are displayed and the amount of time each response is shown. You may also choose to show the top responses as percentage of votes or number of votes.

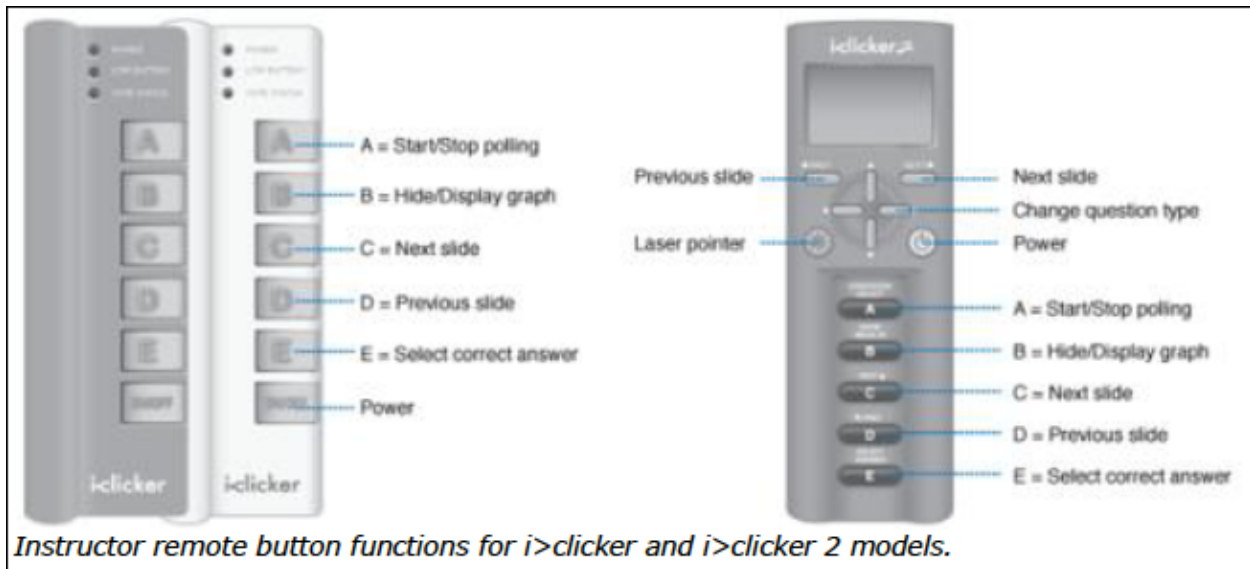

5. Save the settings for the base station display.

Learn more about i>clicker

Use your instructor remote to control i>clicker

You may designate one remote as the instructor remote for your own use in class. The instructor remote controls polling and moves between slides in your presentation software, allowing you freedom to move around the room while conducting i>clicker polling sessions.

Review the instructor remote options.

As shown above, the five response buttons (A, B, C, D, E) control key functions of the **i>clicker** polling software. The **i>clicker 2** instructor remote includes a laser pointer and also provides the capability to change the question type.

TIPS:

- Many instructors use the blue standard **i>clicker** remote as the instructor remote. There are no technical differences between the blue **i>clicker 1** or **i>clicker +** instructor remote and a white **i>clicker 1** or **i>clicker +** student remote, respectively. The color is designated to make it easier for you to keep track of your individual and loaner remotes. The **i>clicker 2** instructor remotes, on the other hand, are designed specifically for use by instructors and cannot be used as student remotes.
- To use the instructor remote to control your presentation software, the presentation software must be the "active" application on your computer screen. If **i>clicker** becomes the "active" program, select the presentation screen to make the presentation the "active" application again.

Use i>clicker with presentation software and videos

The i>clicker software is designed to be used with any presentation software. However, as is typically the case, not all third-party software applications work the same way. The following is a list of "tips and tricks" that can be used for the best experience using i>clicker with your presentation software.

Microsoft PowerPoint

The i>clicker polling session toolbar is designed to "float" on top of PowerPoint presentations when in slide show mode. This makes it easy to run a presentation and conduct polling at the same time. Occasionally, you may find that the i>clicker toolbar "disappears" while running a presentation. If this happens, it is because PowerPoint has taken focus away from the i>clicker toolbar. To correct this situation, simply press **ALT+Tab** (Win) or **Command+Tab** (Mac) on your keyboard and toggle to the i>clicker application icon. This brings the toolbar back into view.

Many instructors take advantage of the i>clicker instructor remote to advance their PowerPoint slides and conduct polling. In order to advance your slides, PowerPoint must be in focus. If you find that the instructor remote does not advance your slides, select the PowerPoint presentation to bring PowerPoint back into focus.

Apple Keynote

Keynote users must change a preference in the Slideshow Preferences window in order for i>clicker to float on top of a presentation.

1. Select **Preferences** from the **Keynote** menu option.
2. Choose the **Slideshow** icon in the toolbar.
3. Select the **Allow Expose, Dashboard and other to use screen** option.
4. Close the preferences window.

If at any time the **i>clicker** toolbar or any **i>clicker** window "disappears" behind your Keynote presentation, press **Command+Tab** on your keyboard and toggle to the **i>clicker** application icon. This brings the **i>clicker** toolbar back into view.

Prezi

i>clicker works best when Prezi presentations are downloaded to your desktop rather than run within a web browser. When using a Prezi presentation, you may create the presentation using the free, online version of Prezi or the Prezi Pro desktop version. After creating your presentation, save the presentation to your desktop or another location that you can access while in your class. Once the presentation is downloaded, you can run it in full-screen mode. The **i>clicker** toolbar will "float" above the presentation, and you can even use the instructor remote to advance your Prezi "slides".

NOTE: If you attempt to run Prezi in full-screen mode from a web browser, **i>clicker** may force Prezi out of full-screen mode. Download your Prezi presentation to your computer or thumb drive to resolve this issue.

Online Videos

i>clicker works best when running online videos in standard rather than full-screen mode. If you run online videos in full-screen mode, **i>clicker** may cause the video to exit full-screen mode.

Permanently loan a clicker to a student

*The **Loan Clicker** feature may be used to permanently assign a clicker to a student for the entire term. This option manually registers a single student at a time. This process is useful to register the occasional late addition to your course or for a student who buys a new remote partway through the term. It is also possible to temporarily assign a clicker to a student for a single session. Follow the steps below to permanently loan a clicker to a student.*

1. Select a course on the i>clicker home screen.
2. Choose Loan Clicker from the Course menu.

TIP: You can also permanently loan a clicker during a session by choosing **Loan Clicker** from the **Options** menu on the session toolbar.

3. Enter the 8-character ID located on the student's clicker.

The screenshot shows a dialog box with the following elements:

- Remote ID:** A text input field with a placeholder icon and the text "8-character code" to its right.
- Student:** A dropdown menu.
- Duration:** Two radio button options: "Temporary (session)" and "Permanent (term)". The "Permanent (term)" option is selected. Below the "Temporary (session)" option, the text "Session must be active." is displayed.
- Buttons:** "Cancel" and "Save" buttons at the bottom right.

The remote ID field is not case-sensitive.

TIP: The **Loan Clicker** window can be used to capture a transmitted remote ID. This feature is useful for avoiding remote ID entry errors or when a remote ID is illegible. This option is only enabled after a session is started and is indicated by an active **Transmit** icon next to the **Remote ID** entry field.

4. Select the student from the pop-up menu.

The student names in the list are pulled from your roster. You must prepare a roster before choosing to loan a clicker to a student.

5. Verify that the duration is set to permanent.

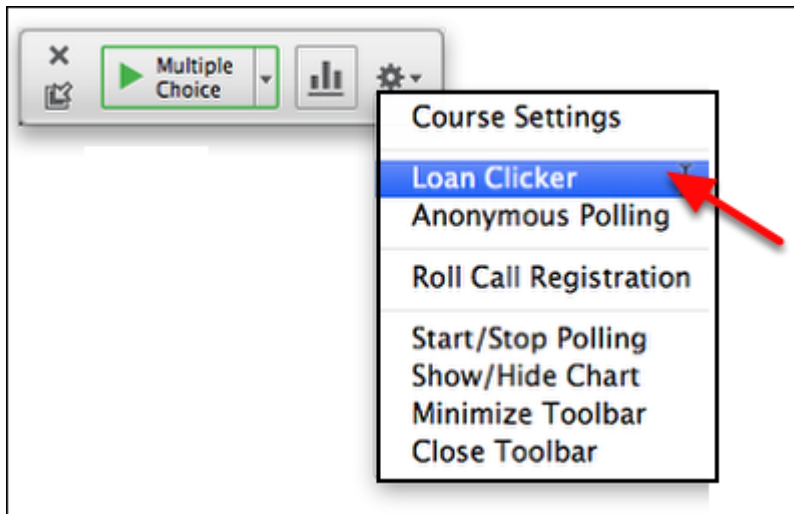

6. Save the clicker assignment.

Temporarily loan a clicker to a student

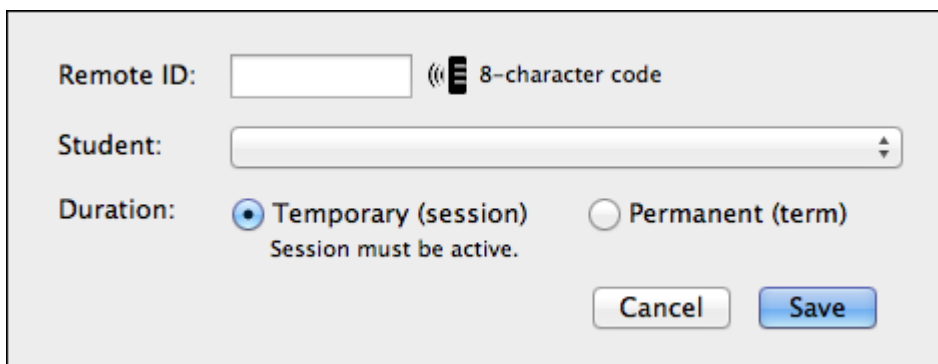

You can temporarily assign a remote to a student for a single polling session. This is a useful feature for lending a student your extra remote when they forget to bring their own remote to class.

IMPORTANT: The option to temporarily loan a clicker is only enabled during an active polling session.

1. Select a course and start a new session.
2. Choose Loan Clicker from the Options menu on the toolbar.

3. Enter the remote ID and select the student from the pop-up menu.

A screenshot of the 'Loan Clicker' dialog box. It has a light gray background. At the top, there is a 'Remote ID:' label followed by a text input field and a small icon of a remote control with the text '8-character code' next to it. Below this is a 'Student:' label followed by a dropdown menu. At the bottom, there is a 'Duration:' label with two radio buttons: 'Temporary (session)' (which is selected) and 'Permanent (term)'. Below the radio buttons, it says 'Session must be active.' At the very bottom right, there are two buttons: 'Cancel' and 'Save'.

TIP: Rather than entering the remote ID, the student can transmit the remote ID. This feature is useful for avoiding remote ID entry errors or when a remote ID is illegible. This option is only enabled after a session is started and is indicated by an active **Transmit** icon next to the **Remote ID** entry field.

4. Set the duration to temporary.

5. Save the assignment.

Change the frequency code on a student clicker

*If you change the base station frequency from **AA**, instruct your students how to change the frequency on their clickers.*

The instructions vary depending on the clickers. Provide the necessary instructions to your students.

NOTE: *The receiver must be plugged in and a session must be started before students can change the clicker frequency.*

Provide these steps to students with i>clicker and i>clicker + devices.

Students with these devices must change their remote frequency at the beginning of each session. When you begin polling, an alert appears indicating the frequency.

1. Press and hold the On/Off button until the Power indicator light begins flashing.
2. Enter the 2-character frequency code using the buttons (A B C D) on the clicker.

Provide students with the frequency code (e.g., BB). Once a student successfully enters the code on a clicker, the Power light stops flashing.

Instruct students with i>clicker 2 devices to follow these steps.

The **i>clicker 2** remote remembers the last saved frequency. If your students change the frequency in your class and do not later change frequencies again, the **i>clicker 2** device remembers the frequency from your class. The frequency briefly appears on the LCD screen when a student powers on a device.

1. Press and hold the On/Off button until the LCD screen shows a flashing frequency code.

2. Enter the 2-character frequency code using the buttons (A B C D) on the clicker.

A checkmark briefly appears on the remote LCD indicating that you have successfully reset the frequency code.

Resolve a multiple clicker ID warning

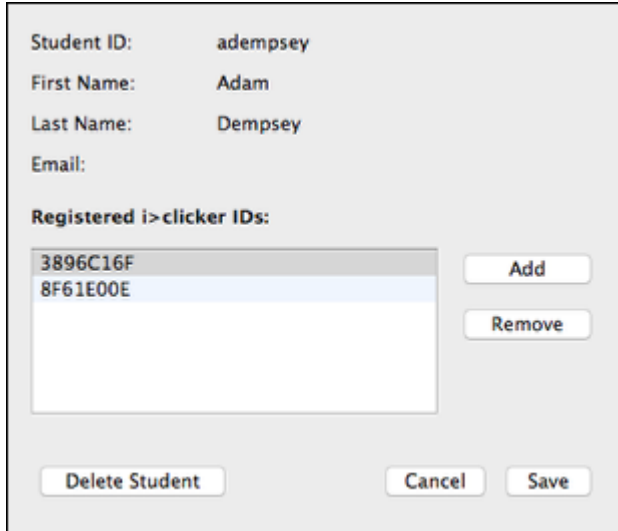

While it is not likely, a student may be associated with two clickers. If this does occur, the i>clicker program warns you of this situation when you open or close the gradebook. Edit the student record to remove a clicker ID.

1. Review the multiple clicker ID warning.

Review the student IDs shown in the window. Make a note of the student(s) who have two or more remote IDs.

2. Open the gradebook.
3. Select (double-click) a student record to remove a remote ID.

The screenshot shows a web-based interface for managing student records. It includes fields for Student ID, First Name, Last Name, and Email. Below these is a section titled "Registered i>clicker IDs:" containing a list box with two entries: "3896C16F" and "8F61E00E". The "8F61E00E" entry is highlighted. To the right of the list box are "Add" and "Remove" buttons. At the bottom of the interface are "Delete Student", "Cancel", and "Save" buttons.

Student ID:	adempsey
First Name:	Adam
Last Name:	Dempsey
Email:	
Registered i>clicker IDs:	
<div>3896C16F</div> <div>8F61E00E</div>	
<div>Add</div> <div>Remove</div>	
<div>Delete Student</div> <div>Cancel</div> <div>Save</div>	

4. Highlight the remote ID incorrectly associated with the student and select Remove to delete that clicker ID.
5. Save the updated student record.

Assign or remove an unregistered clicker

Within the *i>clicker* gradebook, you can assign or remove unregistered clickers. If you have a few unassigned clickers, follow the steps here. Otherwise, refer to the instructions for [preparing your roster](#). **NOTE:** Assigning or removing an unregistered clicker is necessary if a student dropped a class after a participating in a polling session or there was a problem with the clicker registration.

1. Select a course and choose to access the gradebook.

2. Select (double-click) a clicker ID to view the Unregistered Clicker window.

The screenshot shows the iClicker 7.6 interface. On the left is a roster table with columns for Name, Course Average, and Course Total. A red arrow points from the clicker ID '#45dd3931' in the roster to a pop-up window titled 'Unregistered Clicker: 45dd3931'. The pop-up window has a dropdown menu for 'Assign to student ID:' and buttons for 'Remove', 'Cancel', and 'Save'.

Name	Course Average	Course Total
Possible Points		10.0
Average Points		8.29
Average %		82.9%
#45dd3931	90%	9.0
Fritz, Kathryn	70%	7.0
Granger, Branden	80%	8.0
Hernandez, Nina	85%	8.5
Hornsby, Diana	75%	7.5
Choo, Patrick	80%	8.0
Smith, Lisa	100%	10.0

Unregistered Clicker: 45dd3931

Assign to student ID:

Remove Cancel Save

3. Assign the clicker ID to a student or choose to remove the unregistered clicker.

If a student to be assigned does not appear in the pop-up menu, you will need to add that student to the roster.txt file.
